Subject: Low stress and certain results

Specify timetables and percentages of reduction of oversize commodity positions . IE , Specify minimum AND maximum percentage of position to be unwound per time period increment . Prevent failure to reduce position size and prevent a sudden damaging reduction in position size . Large traders may need to unwind at a rate that is between say 10% and 20% per 6 month time period .

3 years of time from finalizing and approval by process , mandated timetable with minimum and maximum % to be achieved . Gold can take large tonnage inputs to the marketplace . Right now in the industry more and more mines are coming online production and increasing the supply rapidly . Off take is much lower . Time is needed to assimilate that much Gold into the system . Jobs are at stake . Lots of jobs in related industries all over the earth .

Thank you for suffering a nonprofessional in Law and a simple concerned small investor . Best of luck and have a good day ! Ed .
