Subject: The new Financial Regulatory Reform law

Dear Chairman Gensler and Fellow Commissioners,

The new Financial Regulatory Reform law mandates that the Commission institute hard position limits in the derivatives trading of all commodities of finite supply; energies, metals and agricultural products. The Commission has sought input to help guide it in determining the proper levels of speculative position limits in these commodities. It is important that the formula for determining such levels be consistent, economically sound, fair, and readily understood by all market participants. These same principles must also be applied to the granting of exemptions to any limits for bona fide hedging purposes.

I propose that the Commission adopt a hard position limit in the contract equivalent amount of no more than one percent of the world annual production of any commodity of finite supply. This 1% speculative position limit would apply to all related derivatives on an aggregate (across all markets) and on an all-months-combined basis. No single speculative trading entity could control on a net basis, long or short, a total derivatives position greater than one percent of the annual world production of any commodity. Such a limit would be large enough to accommodate all but a handful of traders in every market. Importantly, such a level, evenly enforced, would make concentration and manipulation impossible.

As far as the matter of bona fide hedging exemptions to legitimate position limits, the granting of exemptions should be as fair and consistent as the setting of the amount of limits. Any legitimate producer or consumer of any commodity of finite supply should be able to hedge its risk up to the amount of its own annual production or consumption. If a farmer grows, or a miner produces, more than 1% of world production, that entity can hedge up to the actual annual amount produced. If an entity owns the physical commodity and is at price risk with that holding, that entity should be allowed to hedge that actual inventory, even if it is more than 1% of world annual production. But close attention must be paid by regulators to ensure that such an entity is not gaming the market. Any thought that financial middlemen, such as large banks, should be included in the legitimate producer or consumer category must be resisted. Our futures markets were not created so that big financial institutions could manipulate them. The whole thrust of the Dodd-Frank financial reform law was to get the big banks to stop interfering in our markets.

The Commission has a unique opportunity to finally set position limits on all commodities of finite supply in a manner that is fair, simple and economically sound. A formula based upon a straight one percent or less of world production would accomplish that.

Sincerely,

Frank Hecox

A concerned citizen that notes this situation has gone on too long. A lot of silver and gold investors will be sending in one of these, I hope. Silver value is moving up because of Mr. Butler has been sending similar letters to the Chairman for a long time but he didn't do anything about it. One of the banks is still holding a lot of paper silver they have to cover.
