

UNITED STATES OF AMERICA
COMMODITY FUTURES TRADING COMMISSION

OPEN MEETING OF THE COMMISSION

Washington, D.C.
Wednesday, December 16, 2015

1 PARTICIPANTS:

2 Commissioners:

3 CHAIRMAN TIMOTHY G. MASSAD

4 COMMISSIONER SHARON Y. BOWEN

5 COMMISSIONER J. CHRISTOPHER GIANCARLO

6 CFTC Staff:

7 CHRISTOPHER KIRKPATRICK
Secretary of the Commission

8

First Presentation:

9

10 JEFFREY M. BANDMAN
Division of Clearing and Risk

11 JULIE MOHR
Division of Clearing and Risk

12

13 JAMES ORTLIEB
Division of Clearing and Risk

14 VINCE MCGONAGLE
Division of Market Oversight

15

16 RACHEL BERDANSKY
Division of Market Oversight

17 DAVID TAYLOR
Division of Market Oversight

18

19 SUSAN STEWART
Division of Market Oversight

20 Second Presentation:

21 JOHN C. LAWTON
Division of Clearing and Risk

22

1 PARTICIPANTS (CONT'D):

2 RAFAEL MARTINEZ
3 Division of Swap Dealer and Intermediary
4 Oversight

4 FRANCIS KUO
5 Division of Swap Dealer and Intermediary
6 Oversight

6 SCOTT MIXON
7 Office of the Chief Economist

7 PAUL SCHLICHTING
8 Office of General Counsel

1 P R O C E E D I N G S

2 (10:33 a.m.)

3 CHAIRMAN MASSAD: Good morning. This
4 meeting will come to order. This is a public
5 meeting of the Commodity Futures Trading
6 Commission. I'd like to welcome members of the
7 public, market participants, members of the media,
8 as well as those taking part on the phone or via
9 webcast. Today we have gathered to consider three
10 important measures. The first two are proposed
11 rules on system safeguards, which will address
12 concerns in our markets that relate to
13 cybersecurity and technological or operational
14 risk. In addition, we will consider a final rule
15 on margin for uncleared swaps.

16 Now, before I discuss these rules
17 specifically, I want to take this opportunity to
18 thank the CFTC staff for all their hard work and
19 dedication. I'd also like to thank my fellow
20 Commissioners and their staffs for their
21 collaboration and constructive input. I'm very
22 pleased that we have avoided the obstruction and

1 division that we too often see in Washington in
2 favor of working together constructively on behalf
3 of the American people.

4 I would also like to take just a moment
5 to look back at some of the things we have
6 accomplished this year. Our enforcement division
7 has continued to do an excellent job holding
8 entities accountable for their behavior. We
9 brought or resolved actions related to integrity
10 of benchmarks, improper behavior such as spoofing,
11 traditional scams such as Ponzi schemes and
12 failure to comply with reporting obligations.
13 Over the past fiscal year, the CFTC's total
14 monetary sanctions topped more than \$3.2 billion.
15 This included an \$800 million sanction -- the
16 largest in Commission history -- and 69 new
17 enforcement actions. The Commission has also been
18 very focused on the resiliency of clearinghouses.
19 With the increased significance they have taken on
20 in the financial system, it is important that we
21 make sure they are strong and stable. And in
22 addition to our domestic efforts in this regard,

1 we are leading substantial work taking place
2 internationally.

3 We've also focused on automated trading
4 -- issuing a proposed rule just a few weeks ago.
5 We've continued to implement the Dodd-Frank Act
6 reforms and, in particular, Commission staff has
7 taken a number of actions to fine tune our rules,
8 including in the area of SEF trading. SEF trading
9 is still new and we still have significant work
10 ahead of us and our objective is to not only
11 achieve the statutory goals of transparent and
12 competitive trading of swaps on SEFs, it's also
13 about making SEFs -- SEF trading -- attractive to
14 build participation and create a strong foundation
15 on which our markets can thrive. We've also taken
16 steps to improve and enhance the reporting of swap
17 data, as with our proposal on cleared swap
18 reporting.

19 And finally, we have continued to focus
20 on making sure commercial end users can use these
21 markets efficiently and effectively. For example,
22 we amended our rules so that publicly owned

1 utility companies can continue to effectively
2 hedge their risks in the energy swap market, which
3 helps them provide reliable, cost-effective
4 service to their customers. We approved a
5 modification to the residual interest rule, which
6 can affect when customers must post collateral
7 with clearing members. We clarified the treatment
8 of contracts with embedded volumetric optionality.
9 We have also issued some proposals that I hope we
10 can finalize soon pertaining to the treatment of
11 trade options and exempting end users from certain
12 recordkeeping requirements. And in that same
13 vein, the final rule on margin for uncleared swaps
14 that we will consider shortly, exempts end users.
15 We included this exemption in our initial proposal
16 and, in the course of working together to
17 harmonize our rules, the bank regulators agreed to
18 change their rule to do so as well.

19 I won't attempt to preview all that we
20 will be doing next year, but I know we will get
21 off to a busy start. I hope, in particular, that
22 we can finalize a number of SEF registrations

1 early in the new year and take up certain changes
2 to SEF trading rules, including the made available
3 to trade determination process later in the year.
4 We are also continuing to work toward
5 harmonization and mutual recognition with Europe
6 and other international regulators. And we're
7 continuing to work on ways to ensure the data we
8 collect for swaps is more standardized and
9 complete.

10 These are just a few highlights. There
11 is obviously work going on in many other areas.
12 But regardless of the area, we will continue
13 working to ensure these markets are working well
14 for the commercial end users who depend on them.

15 Thank you and I now recognize
16 Commissioner Bowen for her opening remarks.

17 COMMISSIONER BOWEN: Thank you, Mr.
18 Chairman, and good morning, everyone. I also
19 thank the staff for their hard work -- the time
20 that they spent with me and my staff on today's
21 rulemakings.

22 The two subjects before us today may be

1 the most important rulemakings our current
2 Commission will tackle. They go to the very heart
3 of our clear mandate. As regulators, we are
4 charged with protecting the safety and soundness
5 of our financial markets and we must do so in a
6 way that mitigates the risk we faced during the
7 2008 financial crisis. The lens through which I
8 view my role is to make sure that the voiceless
9 and the most vulnerable, our consumers, investors,
10 and the public have a seat at the table.

11 To cut to the chase, I support the two
12 rule proposals on system safeguards which are
13 focused on cybersecurity. We know that without
14 effective cybersecurity, we cannot be confident
15 that important data will not be compromised,
16 therefore raising doubts about the integrity of
17 our markets. Therefore, I support both of these
18 proposals.

19 I cannot, however, support the final
20 rule proposal on margin for uncleared swaps. It
21 fails to fulfill our clear Congressional mandate
22 and I believe its shortcomings could make the

1 financial markets we regulate less safe. We know
2 that without rigorous margin requirements it is
3 possible that firms will make bad bets that would
4 then throw the company's overall financial
5 stability into question -- one that could provoke
6 a spillover contagion panic, which forces us again
7 to grapple with the specter of a new Bear, a new
8 AIG, a new Lehman.

9 Let me first turn to the two rule
10 proposals on system safeguards, which I'm happy to
11 support. Entities in our markets are facing an
12 unrelenting onslaught of attacks from hackers with
13 a number of motives ranging from petty fraud to
14 international cyber warfare. In recent testimony
15 before Congress, the Director of the Center for
16 Cyber and Homeland Security stated that one bank
17 they queried noted that in one week it averaged an
18 attack every 34 seconds.

19 Under our current rule structure, many
20 of our registrants have system safeguard
21 requirements. Yet, I believe the scope of the
22 current cybersecurity risk we face today require

1 us to do more. While some firms are clearly
2 engaging in best practices, we have no guarantee
3 that all of them are. And as I've said before,
4 we're collectively only as strong as our weakest
5 link and so we need a high baseline level of
6 protection for everyone.

7 And while I think the staff has put
8 together two thoughtful proposals, and there are
9 many aspects of these proposals that I
10 particularly like, however, I view this as only a
11 first step since all of our registrants -- not
12 just exchanges, SEFs, SDRs and DCOs -- need to
13 have clear cybersecurity measures in place. I'm
14 also very eager to hear what the public has to say
15 about these proposals. Thus, I will be voting in
16 favor of both. Excuse me one second.

17 Now to turn to uncleared margin for
18 swaps. I think it's important for us to step back
19 and ask ourselves a basic question. What is the
20 purpose of mandating margin -- uncleared margin --
21 and what was Congress asking us to do? I think
22 the answer is clear -- to protect against the next

1 financial crisis, to do our best to prevent the
2 incredibly high cost our taxpayers and our global
3 financial markets have suffered and continue to
4 suffer today.

5 In 2008, our financial system was
6 brought to its knees as a tidal wave of losses
7 washed away the savings of many and destroyed
8 confidence in our financial markets. It also
9 swept away misplaced confidence about the ability
10 of large, sophisticated, financial players to
11 manage their own risk. We learned -- or should
12 have learned -- how vulnerable our financial
13 system is to excessive leverage and poor risk
14 management. If more margin had been required for
15 swaps, some firms would have had the money they
16 needed to unwind some of their bad bets. Fewer
17 firms may have needed bailouts and the entire
18 crisis may have been mitigated. Instead, with no
19 margin for these swaps, Washington had to step in
20 in a way that still rankles just about everyone.
21 The large players were bailed out by taxpayers and
22 returned to regular profits.

1 Our taxpayers had no similar help. No
2 recourse to the financial institutions that harmed
3 them. No help to pick up the pieces and rebuild a
4 financial future. Margin requirements for
5 uncleared swaps are a critical safeguard against
6 repeating those mistakes. They provide the
7 covered entities we regulate for protections
8 against counterparty default. In essence, initial
9 margin and variation margin appropriately align
10 incentives to reduce systemic risks and excessive
11 leverage to ensure that parties, in fact, have the
12 capacity to meet their obligations.

13 In 2010, the Dodd-Frank Act created the
14 categories of swap dealers and major swap
15 participants. And Congress recognized the higher
16 risks swap dealers faced from using uncleared
17 swaps. While this rule does have some benefits,
18 it is inadequate when compared to our own
19 September 2014 proposal and the rule passed by the
20 prudential regulators. It puts the very swap
21 dealers we regulate in even greater risk in times
22 of financial stress because of its treatment of

1 inter-affiliate margin.

2 This final rule provides an exemption
3 for swap dealers -- excusing them from collecting
4 initial margin for inter-affiliate transactions
5 they enter into with most affiliated parties.
6 This exemption only really affects the very
7 largest financial institutions, those that are
8 central to our financial infrastructure and at the
9 heart of the last crisis. I think this exemption
10 is a mistake for three reasons.

11 First, how will we know whether the
12 entities that will receive this exemption are able
13 to understand and communicate internally where
14 their risks are? The large financial institutions
15 that benefit from this exemption have tremendously
16 complicated organizational structures with webs of
17 hundreds, sometimes thousands, of affiliates
18 spread across the globe. The difference in
19 political, financial, and legal systems across
20 these interconnected, international affiliate webs
21 makes it difficult -- likely impossible -- to
22 fully predict how risk will unfold across the

1 global entity in a period of severe financial
2 stress.

3 This is a major deficiency. As Basel
4 and IOSCO highlighted, the increased risk posed by
5 uncleared derivatives create the same type of
6 systemic, contagion, and spillover risk involved
7 in the 2008 financial crisis.

8 Second, even if these entities do
9 understand the risk, not requiring initial margin
10 for inter-affiliate transactions removes a key
11 safety feature that protects both the financial
12 system and the individual firms in a crisis. By
13 not requiring initial margin for this large swath
14 of trades, it places the swap dealers we regulate
15 and their customers at unnecessary risk in times
16 of financial stress. Without this initial margin,
17 we lose a vital financial shock absorber that is
18 intended to protect an institution against the
19 risk of default.

20 Third, by not requiring initial margin
21 for inter-affiliate swaps, we're going against the
22 spirit and, arguably, even the text of Dodd-Frank.

1 Our mandate is to promote the safety and soundness
2 of swap dealers and to harmonize our rules to the
3 maximum extent practicable with our prudential
4 regulators. I see no compelling reason not to do
5 otherwise.

6 We are charged to worry about the
7 financial health of those entities registered with
8 us -- swap dealers. The risks we are dealing with
9 may be remote, but with huge consequences.
10 Financial wizards have shown that they are not
11 good at gauging and protecting against these
12 disastrous events. This action today seems to be
13 a return to blindly trusting in large financial
14 institutions' ability and will to manage systemic
15 risk. And we've already seen where that leads.

16 Dodd-Frank was intended to mitigate
17 against that risk. Our failure to provide
18 comparable protections for our swap dealers, in
19 any shape whatsoever, makes little sense to me. I
20 have seen the devastating effects of the last
21 financial crisis on everyday citizens who lost
22 their life savings as a result of excessive risk

1 taking by these complex financial institutions.
2 Memories of the crisis may fade, but risks spring
3 eternal. I cannot vote for a rule that places the
4 swap dealers we regulate -- and most importantly
5 their customers and the general public -- at risk.
6 Accordingly, I will be voting no today.

7 CHAIRMAN MASSAD: I recognize
8 Commissioner Giancarlo.

9 COMMISSIONER GIANCARLO: Thank you. You
10 may recall, Mr. Chairman, that during one of our
11 very first conversations over a year and a half
12 ago, we discussed the growing risk that cyber
13 threats posed to trading markets. We agreed that
14 cyber and overall system security is one of the
15 most important issues facing markets today in
16 terms of trading integrity and financial
17 stability.

18 Earlier this year I called for a
19 bottom-up approach to combating cyber threats --
20 an approach that involves a close and dynamic
21 relationship between regulators and the
22 marketplace. It requires the continuous

1 development of best practices, defensive
2 strategies, and response tactics through the
3 leadership of market participants, operators, and
4 self-regulatory organizations. As I see it, the
5 job of the CFTC is to encourage, support, inform,
6 and empower this continuous development so that
7 market participants adopt fully optimized and
8 up-to-date cyber defenses. It is appropriate that
9 we are now taking up the subject of system
10 safeguards. I commend Chairman Massad and the
11 CFTC staff for putting forth today's proposal. I
12 believe it generally reflects the bottom-up
13 approach I advocate and I'm pleased to support it.

14 It is right that the proposal covers not
15 just designated contract markets, but also swap
16 execution facilities. From my experience, SEFs
17 are as concerned with cybersecurity as our DCMs.
18 Nevertheless, it is true that the rules will
19 impose additional costs on some SEFs at a time
20 when they are struggling to implement the myriad
21 new Dodd-Frank requirements and obligations.
22 Because system and cybersecurity should be a

1 priority on registrant's precious time and
2 resources, the CFTC must find ways to alleviate
3 unnecessary regulatory costs. The best way to do
4 this is to correct the flawed swaps trading rules
5 that remain fundamentally mismatched to the
6 distinct liquidity and trading dynamics of global
7 swaps markets. Complying with misbegotten swaps
8 trading rules absorbs technical and human
9 resources that SEFs need to devote to
10 cybersecurity.

11 Given the constantly morphing nature of
12 cyber risk, the best defenses provide no guarantee
13 of protection. Therefore, it would be a perverse
14 and unfortunate result if any final system
15 safeguards rule were to have a chilling effect on
16 robust cybersecurity efforts. Market participants
17 who abide by the rule should not be afraid of a
18 double whammy of a destructive cyberattack
19 followed shortly thereafter by a CFTC enforcement
20 action. Being hacked, by itself, cannot be
21 considered a rule violation subject to
22 enforcement. The CFTC should offer clear guidance

1 to market participants regarding their obligations
2 under the rule and designate safe harbors for
3 compliance with it.

4 As market regulators, we can have no
5 naïve illusions that cyber belligerents -- foreign
6 and domestic -- view the world's financial markets
7 as anything other than 21st century battlefields.
8 Cyberattacks on trading markets will not diminish
9 any time soon. They will be relentless for years,
10 if not decades, to come. Cyber risk is a threat
11 for which Dodd-Frank provides no guidance
12 whatsoever. Together, market regulators and the
13 regulated community must make cyber and system
14 security our first priority in time and attention.

15 Today's proposal is a constructive step
16 toward that goal. I look forward to reviewing
17 thoughtful comments from market participants and
18 the public. I'd now like to turn to margin
19 requirements for uncleared swaps.

20 Today's final rule regarding margin
21 requirements for uncleared swaps is far from
22 perfect. The Commission had the unenviable task

1 of harmonizing its rule with the prudential
2 regulators' rules and with the BCBS/IOSCO
3 standards. Nevertheless, I think the final rule
4 is far better balanced than the previous proposal.
5 I direct the public to my detailed written
6 statement that will be included in the Federal
7 Register, but right now I want to focus on just
8 two aspects of the rule -- inter-affiliate margin
9 and the economic impact of today's rule.

10 An honest discussion of margin
11 requirements for inter-affiliate swaps must begin
12 with the recognition that inter-affiliate swaps do
13 not involve transactions between distinct
14 financial institutions that were at the heart of
15 the 2008 financial crisis. They do not pose the
16 systemic risk that the Dodd-Frank Act was
17 ostensibly designed to address. Congress
18 expressed no particular intention to subject
19 inter-affiliate transactions to clearing or
20 inter-affiliate margin.

21 Accordingly, the CFTC adopted a rule in
22 April 2013 to exempt certain inter-affiliate swaps

1 from mandatory clearing. That rulemaking,
2 supported by former Chairman Gensler and
3 Commissioners Wetjen, Chilton and O'Malia,
4 recognized that inter-affiliate swaps provide an
5 important risk management role within corporate
6 groups. They enable use of a single conduit on
7 behalf of multiple affiliates to net down trades
8 and reduce the overall risk of the corporate group
9 and the number of outward-facing swaps into which
10 the affiliates might otherwise enter. This, in
11 turn, reduces operational, market, counterparty
12 credit and settlement risk. Rather than
13 increasing risk, inter-affiliate swaps allow
14 entities within a corporate group to transfer risk
15 to the group entity best positioned to manage it.

16 Moreover, in 2013, the Commission found
17 that the exemption promotes responsible financial
18 innovation, fair competition and is consistent
19 with the public interest. It further found that
20 the exemption, which was conditioned on having
21 certain risk mitigating measures in place, would
22 not have a material effect on the Commission's

1 ability to discharge its regulatory
2 responsibilities.

3 I believe the Commission's 2013 findings
4 remain valid. I am aware of no facts that have
5 come to light in the interim that would change the
6 original assessment made under former Chairman
7 Gensler. In fact, since issuing the proposed rule
8 for notice and comment, an independent
9 cost-benefit analysis recommended, among other
10 things, exempting inter-affiliate swaps from
11 initial margin requirements as a means to reduce
12 the excessively onerous impact of the rule on
13 competition, price discovery and overall market
14 efficiency without additional systemic risk. I
15 concur with that recommendation.

16 Earlier this year, in Congressional
17 testimony, I explained that the cost of imposing
18 initial margin on inter-affiliate transactions
19 would have two likely impacts. First, it would
20 raise the cost of commercial risk hedging for
21 American end-users. And second, it would
22 encapsulate risk in the U.S. marketplace and thus

1 increase -- not decrease -- risk of systemic
2 hazard in American financial markets.

3 Today's final rule is not naïve or
4 reckless. It recognizes that inter-affiliate
5 swaps transactions are not without risk and sets
6 appropriate safeguards. First, it requires
7 operation of a centralized risk management
8 program. Second, the rule requires variation
9 margin. And third, it requires the collection of
10 initial margin for non-U.S. affiliates not
11 collecting initial margin for their own
12 outward-facing swaps with financial entities.
13 These measures appropriately address the risks
14 associated with uncleared inter-affiliate swaps.

15 Now let me turn to the broader topic of
16 economic impact. From my perspective, the most
17 objectionable aspect of today's rule is its
18 foundation in the superficial logic that if the
19 cost of margining uncleared swaps is forced high
20 enough, then market participants will use more
21 cleared instruments. That foundation is not
22 supported by either reason or experience. If no

1 clearinghouse is willing to clear a particular
2 swap, no amount of punitive cost -- no matter how
3 onerous -- will enable it to be cleared.

4 I know something about swaps clearing
5 because I was involved before the financial crisis
6 in one of the first independent efforts by
7 non-Wall Street banks to develop a clearinghouse
8 for credit default swaps. I am a longstanding
9 supporter of increased central counterparty
10 clearing of suitable swaps. Yet I also recognize
11 -- as do an increasing number of others -- that
12 central counterparty clearing is no panacea for
13 credit risk. As regulators, we must be
14 intellectually honest and adopt a balanced view
15 acknowledging that there are legitimate and vital
16 needs for both cleared and uncleared derivative
17 products.

18 In a modern, complex, \$18 trillion
19 economy, uncleared swaps allow businesses to avoid
20 basis risk and obtain hedge accounting treatment
21 under U.S. GAAP for more complex, non-standardized
22 exposures. Uncleared swaps are an unmatched tool

1 for customized risk management by businesses,
2 governments, asset managers and other institutions
3 whose operations are essential to American
4 economic growth. Their precise risk transfer
5 utility generally cannot be replicated with
6 standardized cleared derivatives.

7 Today's rule also reflects a
8 disingenuous reading of the Dodd-Frank Act to
9 favor cleared derivatives over uncleared swaps.
10 In fact, there is nothing in the law directing
11 regulators to set punitive levels of margin in an
12 attempt to drive market participants toward
13 cleared products. Imposing punitive margin levels
14 will lead to a range of adverse consequences
15 including raising the commercial cost of risk
16 hedging, reducing trading liquidity in uncleared
17 swaps markets, and incentivizing the movement of
18 products otherwise unsuitable for clearing into
19 clearinghouses into which counterparty risk is
20 already increasingly concentrated. More
21 critically, punitive margin on uncleared swaps
22 will increase the amount of inadequately hedged

1 risk exposure on America's corporate balance
2 sheets exacerbating volatility in earnings and
3 share prices.

4 Yet, I know that my voice alone cannot
5 reverse the course of the present prevalence of
6 macro-prudential regulation -- an approach that
7 prioritizes systemic stability over investment
8 opportunity, market vibrancy and American economic
9 growth. Only time will show that systemic risk
10 cannot be managed through centralized economic
11 planning. In fact, rather than being managed,
12 systemic risk is being transformed today from
13 counterparty credit exposure to jarring volatility
14 spikes and liquidity risk across the breadth of
15 financial markets, with ramifications that will be
16 even harder to manage in the future.

17 Unfortunately, today's rule will not
18 reverse those trends. Yet I will vote for the
19 rule, not because it is the right prescription for
20 uncertain markets, but because it is much better
21 than originally proposed and less harmful to the
22 U.S. economy than likely alternatives.

1 I must commend the CFTC staff for their
2 hard work, thoughtfulness, and, ultimately, the
3 generally improved rulemaking that is before us
4 today. Thank you.

5 CHAIRMAN MASSAD: Thank you. For each
6 of the items on today's agenda, the staff will
7 make presentations to the Commission. After each
8 presentation, the floor will be open for questions
9 and comments from each of the Commissioners.
10 Following the close of discussion on each matter,
11 the Commission expects to vote on the staff
12 recommendation as presented. All final votes
13 conducted in this public meeting shall be recorded
14 votes. The results of votes approving the
15 issuance of rulemaking documents will be included
16 with those documents in the Federal Register.

17 At this point, I ask unanimous consent
18 to allow staff to make technical corrections to
19 the documents voted on today prior to sending them
20 to the Federal Register. Without objection, it is
21 so ordered.

22 At this time I would like to welcome

1 Vince McGonagle, Rachel Berdansky, Susan Stewart,
2 and David Taylor from the Division of Market
3 Oversight and Julie Mohr, James Ortlieb, and Jeff
4 Bandman from the Division of Clearing and Risk for
5 their presentations on two proposed rules related
6 to system safeguards.

7 MR. TAYLOR: Good morning, Mr. Chairman
8 and Commissioners. Before I begin, I would like
9 to thank my fellow Division of Market Oversight
10 team members including Rachel --

11 CHAIRMAN MASSAD: Make sure you speak
12 very close to the mic.

13 MR. TAYLOR: Yes, I've learned that.
14 Before I begin, I would like to thank my fellow
15 Division of Market Oversight team members
16 including Rachel Berdansky, David Steinberg,
17 Shifra Katz, Susan Stewart, Chris Russell-Wood,
18 Mike Bartlett, and Kyle Miller, and my systems
19 safeguards colleagues in the Division of Clearing
20 and Risk, as well as Dave Reiffen from the Office
21 of the Chief Economist and Dhaval Patel and Susan
22 Nathan from the Office of the General Counsel for

1 their hard work in preparing the proposals we are
2 presenting to the Commission today.

3 Today staff is recommending that the
4 Commission approve two parallel notices of
5 proposed rulemaking or NPRMs, addressing
6 cybersecurity and system safeguards requirements
7 for designated contract markets or DCMs, swap
8 execution facilities or SEFs, swap data
9 repositories or SDRs, and derivatives clearing
10 organizations or DCOs. My DCR colleague, Julie
11 Mohr, and I will share the task of making the
12 presentation.

13 The proposed rules would enhance and
14 clarify existing Commission rule provisions
15 relating to cybersecurity testing and system
16 safeguards risk analysis and oversight, and add
17 new provisions concerning certain aspects of
18 cybersecurity testing. Most importantly, the
19 proposed rules clarify the existing rules by
20 specifying and defining the types of cybersecurity
21 testing that DCMs, SEFs, SDRs, and DCOs must
22 conduct in order to fulfill their regulatory

1 system safeguards testing obligations.

2 Staff is recommending these rules
3 concerning system safeguards testing at a time
4 when cyber threats to the financial sector
5 continue to expand significantly. While preparing
6 the proposed rules, staff considered relevant
7 information discussed during the March 2015
8 Roundtable on Cybersecurity and System Safeguards
9 Testing and the June 2015 meeting of the
10 Commission's Market Risk Advisory Committee.
11 Participants highlighted a number of noteworthy
12 aspects of current cyber threats. Examples
13 include an escalating volume of cyberattacks,
14 coming from increasing numbers of more dangerous
15 cyber adversaries with worsening goals, including
16 disruption of operations, theft of data or
17 intellectual property and corruption or
18 destruction of data or automated systems; advanced
19 persistent threats designed to remain undetected
20 over a long period of time; and an expanded cyber
21 threat field that includes mobile devices, the
22 cloud, phishing and other social engineering

1 attacks, and insider threats. Cybersecurity
2 testing by DCMs, SEFs, SDRs, and DCOs can harden
3 their cyber defenses; mitigate their operations,
4 reputation, and financial risks; and maintain and
5 increase their cyber resilience and their ability
6 to detect, contain, respond to, and recover from
7 cyberattack.

8 As set out in detail in both NPRMs,
9 cybersecurity testing is a well-established best
10 practice both generally and for financial sector
11 entities. Such testing is becoming a requirement
12 for obtaining cyber insurance and it is also
13 supported internationally by both financial
14 regulators and standards bodies. Its importance
15 is increased by the nature of the cybersecurity
16 threats faced by the financial sector. It is for
17 these reasons, and in light of this background,
18 the staff is recommending approval of these NPRMs.

19 As we will outline for you, the central
20 point of the proposed rules is the proposed
21 requirement for all DCOs, all DCMs, all SEFs, and
22 all SDRs regulated by the Commission to conduct

1 five important types of cybersecurity testing that
2 are essential to an effective program of system
3 safeguards risk analysis and oversight. One,
4 vulnerability testing. Two, penetration testing.
5 Three, controls testing. Four, security incident
6 response plan testing. And five, enterprise
7 technology risk assessment.

8 The Commission's existing system
9 safeguards rules require these entities to conduct
10 testing to ensure the reliability, security, and
11 capacity of their systems. Best practices
12 establish that it would be impossible to fulfill
13 the purposes of that requirement without
14 conducting these five types of testing. In this
15 respect, therefore, the proposed rules clarify
16 what is already required of these entities.

17 As we will note in presenting each of
18 the five types of testing, the proposed rules
19 would also establish minimum testing frequency and
20 independent contractor testing requirements for
21 all DCOs and all SDRs and for covered DCMs. As
22 defined, covered DCMs are those whose total annual

1 trading volume is five percent or more of the
2 total annual trading volume of all DCMs regulated
3 by the Commission. These requirements are also
4 consonant with best practices.

5 The proposed rule for DCMs, SEFs, and
6 SDRs also includes an advance notice of proposed
7 rulemaking, which notes that the Commission plans
8 to consider whether, in a future NPRM, it should
9 define certain SEFs as covered SEFs and make them
10 subject to the minimum testing frequency and
11 independent contractor testing requirements. The
12 request for comments section of the proposal
13 includes a number of questions about whether and
14 how this could most appropriately be done.

15 MS. MOHR: Before I begin, I want to
16 make sure everyone can hear me. Okay. As I begin
17 the next section of the presentation, I would like
18 to thank my DCR colleagues, Jim Ortlieb, Tammy
19 Roust, Eileen Donovan, Laura Astrada, Eileen
20 Chotiner, and Joe Opron, along with Carlene Kim
21 and Brian Trackman from OGC for their hard work on
22 these proposals that we are presenting to the

1 Commission today. We will briefly describe for
2 you this morning each of the five types of
3 cybersecurity testing required by the proposed
4 rules, beginning with vulnerability testing.

5 Vulnerability testing is the process of
6 scanning your systems for weaknesses. As software
7 is developed and deployed, new weaknesses are
8 created, which are called vulnerabilities. These
9 vulnerabilities are created due to various
10 reasons. For example, adding new features to
11 existing software generates transaction paths and
12 logic that create future opportunities for
13 unwanted users to exploit these features in
14 unintended ways. Moving software or hardware
15 around within existing environments can create
16 interconnections between systems or paths through
17 existing systems that offer fresh opportunities
18 for intruders to enter and exploit.

19 In addition, existing software is
20 constantly being tested and probed in new ways by
21 existing deployments including both research
22 efforts and real world attacks. As a DCM, SEF,

1 SDR, or DCO deploys, modifies, and runs its
2 systems, it must remain cognizant of the fact that
3 external entities are constantly probing its
4 defenses looking for these vulnerabilities. If
5 the organization can discover its vulnerabilities
6 before the attackers do, it can attempt to fix
7 them before they are exploited.

8 Vulnerability testing is covered by
9 generally accepted practices and standards such as
10 those published by the National Institute of
11 Standards and Technology or NIST, the Federal
12 Financial Institutions Examination Council or
13 FFIEC, and others. Such generally accepted best
14 practices call for vulnerability testing at a
15 frequency determined by an appropriate risk
16 analysis and, in some cases, also provide that the
17 frequency of such testing should be no less than
18 quarterly.

19 The proposed rules address the frequency
20 at which vulnerability testing should be
21 conducted. As a fundamental principle, they call
22 for all DCMs, SEFs, SDRs, and DCOs to conduct

1 vulnerability testing at a frequency determined by
2 an appropriate risk analysis. For all DCOs, all
3 SDRs and covered DCMs, the rules also include a
4 minimum vulnerability testing frequency
5 requirement calling for the testing to be
6 conducted no less frequently than quarterly.

7 In addition, the proposed rules call for
8 vulnerability testing by all DCOs, all SDRs, and
9 covered DCMs to be performed by independent
10 contractors during at least two of the quarterly
11 tests each year. Independent contractors provide
12 an external insight into an entity's
13 vulnerabilities and weaknesses. Having a fresh
14 external perspective, one that has been formed
15 through experience with other industry players,
16 can be vital to informing those critical financial
17 organizations about how, where, and why they are
18 vulnerable.

19 The second type of cybersecurity testing
20 that the proposed rules would require is
21 penetration testing. Penetration testing is the
22 process of simulating an attack on a system in

1 order to discover and exploit its weaknesses.
2 There are two main forms of penetration testing.
3 They are external and internal. The proposed
4 rules define external penetration testing as
5 attempts to penetrate the entity's automated
6 systems from outside its boundaries to identify
7 and exploit vulnerabilities. The proposed rules
8 define internal penetration testing as attempts to
9 penetrate an entity's automated systems from
10 inside their boundaries for the same purpose.

11 Generally accepted best practices, such
12 as NIST, FFIEC standards, and the Payment Card
13 Data Security Standards, call for organizations to
14 conduct both internal and external penetration
15 testing and to conduct such tests annually. The
16 proposed rules also call for all DCOs, DCMs, SEFs,
17 and SDRs to conduct penetration testing at a
18 frequency determined by an appropriate risk
19 analysis.

20 In addition, the proposals call for
21 penetration testing at least annually by all DCOs,
22 all SDRs and covered DCMs. The proposed rules

1 also provide that the annual external penetration
2 tests required of all DCOs, all SDRs, and covered
3 DCMs must be performed by an external independent
4 contractor. David will now go over the remaining
5 three tests.

6 MR. TAYLOR: The proposed rules also
7 call for all DCMs, SEFs, SDRs, and DCOs to conduct
8 controls testing, including testing of each
9 control that is included in their programs of
10 system safeguards risk analysis and oversight.
11 Controls are the safeguards or countermeasures
12 used by an entity to protect the reliability,
13 security, or capacity of its automated systems or
14 the confidentiality, integrity, and availability
15 of its data and information. Some controls
16 provide safeguards against automated system
17 failures or deficiencies, while others guard
18 against human error, deficiencies, or malicious
19 action.

20 Controls testing assesses each control
21 to determine whether it is implemented correctly,
22 is operating as intended, and is enabling the

1 organization to meet system safeguards
2 requirements. Such testing is called for by
3 generally accepted best practices and standards.

4 The proposed rules address the frequency
5 at which controls testing should be conducted. As
6 a fundamental principal, they call for all DCMs,
7 SEFs, SDRs, and DCOs to conduct controls testing
8 at a frequency determined by an appropriate risk
9 analysis. For all DCOs, all SDRs, and covered
10 DCMs, the rules also include a minimum controls
11 testing frequency requirement calling for testing
12 of each control no less frequently than every two
13 years. Since system safeguards involve large
14 numbers of controls, the rules would permit this
15 to be done on a rolling basis over the course of
16 the minimum two year period or the period dictated
17 by appropriate risk analysis, whichever is
18 shorter.

19 The proposed rules also call for all
20 DCOs, all SDRs, and covered DCMs to have
21 independent contractors test each of the
22 regulatee's key controls, as defined in the rule,

1 no less frequently than every two years. Key
2 controls are those controls that risk analysis
3 determines to be either critically important for
4 effective system safeguards or intended to address
5 risks that evolve or change more frequently and,
6 therefore, require more frequent review to ensure
7 continued control effectiveness. Such independent
8 assessments are consonant with best practices.

9 The fourth type of testing that the
10 proposed rules would require is security incident
11 response plan testing. Best practices call for
12 financial sector entities to maintain and test a
13 security incident response plan or SIRP, which I
14 would venture to predict you will hear referred to
15 as a SIRP. Such plans are crucial to cyber
16 resilience. The proposed rules define security
17 incident as a cyber or physical security event
18 that actually or potentially jeopardizes automated
19 system operation, reliability, security, or
20 capacity, or the availability, confidentiality, or
21 integrity of data. They would require each DCM,
22 SEF, SDR, or DCO to maintain and test an SIRP

1 defined as a written plan documenting the
2 entities' policies, controls, procedures, and
3 resources for identifying, responding to,
4 mitigating, and recovering from security
5 incidents.

6 The rules note that SIRP testing can
7 take a number of possible forms from checklists
8 and tabletop exercise to simulations and
9 comprehensive exercises. The proposed rules also
10 address the frequency at which SIRP testing should
11 be conducted. As a fundamental principal, they
12 call for all DCMs, SEFs, SDRs, and DCOs to conduct
13 SIRP testing at a frequency determined by an
14 appropriate risk analysis. At a minimum, the
15 proposed rules call for all DCOs, all SDRs, and
16 covered DCMs to have SIRP testing performed no
17 less frequently than annually. SIRP testing could
18 be done either by independent contractors or
19 regulatee employees not responsible for
20 development or operation of the systems or
21 capabilities being assessed.

22 Finally, the proposed rules would

1 require each DCM, SEF, SDR, or DCO to conduct
2 enterprise technology risk assessments or ETRAs.
3 An ETRA is a written assessment including
4 identification and analysis of threats and
5 vulnerabilities and the harm they could cause in
6 the context of mitigating controls. In an ETRA, a
7 DCM, SEF, SDR, or DCO may draw together and use
8 the results of the other types of cybersecurity
9 testing in order to identify and mitigate its
10 cybersecurity risks. Conducting ETRAs is
11 consistent with best practices regarding system
12 safeguards.

13 As a fundamental principle, the proposed
14 rules call for all DCMs, SEFs, SDRs, and DCOs to
15 conduct an ETRA as often as indicated by
16 appropriate risk analysis. At a minimum, the
17 proposed rules call for DCOs, covered DCMs and
18 SDRs to have ETRAs performed no less frequently
19 than annually. They would permit regulatees to
20 conduct ETRAs by using either independent
21 contractors or employees not responsible for
22 development or operation of the systems or

1 capabilities being assessed.

2 MS. MOHR: The Commission's current
3 regulations specify various elements, standards,
4 and resources to be included in a registrant's
5 program of risk analysis and oversight with
6 respect to its operations and automated systems.
7 The proposed rules clarify existing rule
8 provisions for all DCOs, DCMs, SEFs, and SDRs
9 concerning (1) the categories of risk analysis and
10 oversight that must be addressed, (2) books and
11 records obligations, (3) the scope of system
12 safeguards testing, (4) internal reporting and
13 reviewing of testing results, and (5) the
14 remediation of vulnerabilities and deficiencies
15 disclosed by the testing.

16 The proposed rule provision addressing
17 the required scope of cybersecurity testing is
18 especially important because adequate testing
19 depends upon the identification of an appropriate
20 scope. The proposed rules would require that the
21 scope of all testing and assessments required by
22 Commission regulations be broad enough to include

1 testing of automated systems and controls
2 necessary to identify any vulnerability which, if
3 exploited or accidentally triggered, could enable an
4 intruder or unauthorized user or an insider to (a)
5 interfere with the registrant's operations or with
6 fulfillment of the statutory and regulatory
7 responsibilities, (b) impair or degrade the
8 reliability, security, or capacity of the
9 registrant's automated systems, (c) add to,
10 delete, modify, exfiltrate or compromise the
11 integrity of any data related to the registrant's
12 regulated activities, or (d) undertake any other
13 unauthorized action affecting the registrant's
14 regulated activities or the hardware or software
15 used in connection with those activities.

16 Another important clarifying provision
17 relates to the governance of cybersecurity and
18 system safeguards, by requiring that reports on
19 testing protocols and the results be communicated
20 and reviewed by both the registrant's senior
21 management and its board of directors.
22 Registrants would also be required to establish

1 and follow appropriate procedures for remediation
2 of the issues identified, and for the evaluation
3 of the effectiveness of the testing and assessment
4 protocols. Each entity would be required to
5 analyze testing and assessment results, in order
6 to identify all vulnerabilities and deficiencies
7 in its systems, and to remediate those
8 vulnerabilities and deficiencies to the extent
9 necessary to enable the entity to fulfill its
10 statutory and regulatory obligations.

11 Also, the Divisions recommend that the
12 proposed rules be open for a 60-day public comment
13 period. This concludes our presentation and we
14 are happy to address any questions.

15 CHAIRMAN MASSAD: Okay. Well I want to
16 thank all of our staff for those informative
17 presentations and again thank all the staff that
18 worked on these proposals. To begin the
19 Commission's discussion and consideration of these
20 rulemakings, I will now entertain a motion to
21 adopt the Division of Clearing and Risks proposed
22 rule relating to system safeguards as presented by

1 the staff.

2 COMMISSIONER GIANCARLO: Second.

3 CHAIRMAN MASSAD: Okay. I would now
4 like to open the floor to allow the Commissioners
5 to make any statements or ask any questions that
6 they may have and I will first turn to
7 Commissioner Bowen.

8 COMMISSIONER BOWEN: Yes, thank you, Mr.
9 Chairman. Thank you so much. A great
10 presentation. As we discussed, this rule covers
11 SDRs, DCMs, SEFs, and DCOs. And I'm wondering
12 whether the staff intends to send proposed rules
13 to us with cybersecurity guidelines to cover other
14 market participants such as FCMs, introducing
15 brokers, major swap participants?

16 MS. BERDANSKY: Commissioner, oversight
17 of the entities you mentioned falls under the
18 Commission's Division of Swap Dealer and
19 Intermediary Oversight. However, I would note
20 that in October 2015, the National Futures
21 Association adopted a cybersecurity interpretative
22 notice to three of its compliance rules defining

1 the core components of an effective information
2 system security program or ISSP for short. The
3 notice, which applies to futures commission
4 merchants, swap dealers, major swap participants,
5 introducing brokers, FOREX dealer members,
6 commodity pool operators, and commodity trading
7 advisors, requires such firms to adopt and enforce
8 an ISSP appropriate to the firm's circumstances.

9 The approach is principles based and
10 provides that an ISSP should cover several key
11 areas, including a security and risk analysis; a
12 description of the safeguards against identified
13 system threats and vulnerabilities; and the
14 process used to evaluate the nature of a detected
15 security event, understand its potential impact
16 and take appropriate measures to contain and
17 mitigate the breach and a description of the
18 members ongoing education and training related to
19 the information system security for all personnel.
20 The notice further requires that ISSP must be
21 approved within the member firms by an executive
22 level official and requires members to monitor and

1 review the effectiveness of the ISSP at least
2 annually, including the effectiveness of the
3 safeguards the firm has deployed.

4 Finally, I would just note that the
5 National Futures Association's notice also directs
6 firms to look to industry best practices, in
7 particular, the NIST cybersecurity framework when
8 developing and adopting an ISSP.

9 COMMISSIONER BOWEN: Thank you, Rachel.

10 CHAIRMAN MASSAD: Commissioner
11 Giancarlo.

12 COMMISSIONER GIANCARLO: Thank you. And
13 I want to thank Julie and David and Jeff and Vince
14 and their teams for their thoughtful approach to
15 cybersecurity, which is a tremendous, if not the
16 largest, challenge we face today. And it is quite
17 a heavy lift to come up with a thoughtful
18 proposal, so I commend you for that. David, I
19 also note the new acronym of SIRP, S-I-R-P. I
20 guess that's our holiday gift for the community to
21 roll out a new acronym at the end of the year, so
22 we'll all be puzzling over that.

1 I don't have questions for you, but I do
2 want to direct the public to my written statement
3 in which I have a number of comments on the
4 proposed rule and I look forward to the public's
5 commentary and discussion on this. Thank you.

6 CHAIRMAN MASSAD: Okay. Well, thank
7 you. I have no questions either. I, again, want
8 to thank the staff. I know this has been a lot of
9 work on both proposals. And I just want to add my
10 support for the proposed rule. I think the risk
11 of cyberattacks is perhaps the most important
12 single issue we face today in terms of threats to
13 financial market stability and integrity. The
14 examples of cyberattacks are unfortunately all too
15 familiar and frequent -- both within the financial
16 sector and outside. And today we must be
17 concerned about the possibility of attacks not
18 only motivated by profit, but that are intended to
19 destroy information and disrupt or destabilize our
20 markets. So the risk to American businesses in
21 our economy is dramatic and the interconnectedness
22 of financial institutions and markets means that a

1 failure in one institution can have significant
2 repercussions.

3 So the proposed rule that we are issuing
4 today is an important step toward enhancing the
5 protections in our markets. It builds on our core
6 principles. Those already require clearinghouses
7 to focus on system safeguards. This rule goes
8 further by setting standards consistent with best
9 practices and it requires robust testing of cyber
10 protection, setting forth the type of testing that
11 must be conducted, the frequency of testing, and
12 whether tests should be conducted by independent
13 parties. And it enhances standards for incident
14 response planning and enterprise technology risk
15 assessments.

16 So I believe these requirements should
17 come as no surprise. Clearinghouses should
18 already be doing extensive testing and, indeed, we
19 hope that today's proposal sets a baseline that is
20 already being met by many of them. The proposal
21 also complements what we as a Commission already
22 do. We focus on these issues in our examinations

1 to determine whether an institution is following
2 good practices and paying adequate attention to
3 the risks at the Board level and on down. And as
4 I noted at the beginning, since 2009,
5 clearinghouses have become increasingly important
6 in the financial system, so I believe we must do
7 all we can to ensure their strength and stability
8 and this proposed rule is a critical component of
9 that effort.

10 Now, of course, we welcome public
11 comment on this proposal, which will be taken into
12 account carefully before we take any final action.
13 If there are no other questions, I would like to
14 just make sure would any other Commissioner like
15 to make any further statements before we proceed
16 to a vote on the motions? Okay.

17 If the Commissioners are prepared to
18 vote, Mr. Kirkpatrick, will you call the roll?

19 MR. KIRKPATRICK: The motion now before
20 the Commission is on the adoption of the Division
21 of Clearing and Risk notice of proposed rulemaking
22 on system safeguards testing requirements for

1 derivatives clearing organizations. Commissioner
2 Giancarlo?

3 COMMISSIONER GIANCARLO: Aye.

4 MR. KIRKPATRICK: Commissioner
5 Giancarlo, aye. Commissioner Bowen?

6 COMMISSIONER BOWEN: Aye.

7 MR. KIRKPATRICK: Commissioner Bowen,
8 aye. Chairman Massad?

9 CHAIRMAN MASSAD: Aye.

10 MR. KIRKPATRICK: Chairman Massad, aye.
11 Mr. Chairman, on this matter, the ayes have three,
12 the no's have zero.

13 CHAIRMAN MASSAD: Thank you. The ayes
14 have it and the motion to adopt the proposed rule
15 is approved. At this point, I will entertain a
16 motion to adopt the Division of Market Oversight's
17 proposal related to system safeguards as presented
18 by the staff.

19 COMMISSIONER BOWEN: So moved.

20 COMMISSIONER GIANCARLO: Second.

21 CHAIRMAN MASSAD: I would now like to
22 open the floor to allow the Commissioners to make

1 any further statements and ask any questions that
2 they may have. And I again will turn to
3 Commissioner Bowen.

4 COMMISSIONER BOWEN: No questions.

5 CHAIRMAN MASSAD: Commissioner
6 Giancarlo?

7 COMMISSIONER GIANCARLO: No questions.

8 CHAIRMAN MASSAD: Okay. Thank you.
9 Well let me just add that I also support this
10 rule. It's obviously very consistent with the DCR
11 proposal. I will add a couple of comments. I
12 previously stated that I did not expect our
13 proposal would apply to SEFs. Now, I said that
14 not because cybersecurity isn't just as important
15 for them, but because many SEFs are still in the
16 very early stages of operation. But, my fellow
17 Commissioners expressed concerns about potential
18 vulnerabilities and both felt that we should
19 propose that the requirements apply to SEFs at
20 this time. I appreciate their views and I am
21 committed to working collaboratively to address
22 this issue and, therefore, we have included it in

1 the proposal. And as with the DCR proposal, we
2 will carefully consider all public comment before
3 taking any final action. Let me just make sure
4 before we proceed to a vote, would any other
5 Commissioner like to make further statement?
6 Okay.

7 Then I will ask Mr. Kirkpatrick to call
8 the roll.

9 MR. KIRKPATRICK: The motion now before
10 the Commission is on the adoption of the Division
11 of Market Oversight proposed rulemaking on system
12 safeguards testing requirements. Commissioner
13 Giancarlo?

14 COMMISSIONER GIANCARLO: Aye.

15 MR. KIRKPATRICK: Commissioner
16 Giancarlo, aye. Commissioner Bowen?

17 COMMISSIONER BOWEN: Aye.

18 MR. KIRKPATRICK: Commissioner Bowen,
19 aye. Chairman Massad?

20 CHAIRMAN MASSAD: Aye.

21 MR. KIRKPATRICK: Chairman Assad, aye.
22 Mr. Chairman, on this matter, the ayes have three,

1 the no's have zero.

2 CHAIRMAN MASSAD: The ayes have it and
3 the motion to adopt the proposed rule is approved.
4 Once again, thank you to the staffs of DMO and DCR
5 for these excellent presentations and excellent
6 work.

7 At this time, I would like to welcome
8 Scott Mixon from the Office of the Chief
9 Economist, Paul Schlichting from the Office of
10 General Counsel, John Lawton from the Division of
11 Clearing and Risk, and Rafael Martinez and Francis
12 Kuo from the Division of Swap Dealer and
13 Intermediary Oversight for their presentations on
14 a final rule on margin for uncleared swaps.

15 CHAIRMAN MASSAD: Please proceed.

16 MR. LAWTON: Good morning. The rules
17 before the Commission would implement Section
18 4s(e) of the Commodity Exchange Act. The rules
19 address margin requirements for uncleared swaps
20 entered into by swap dealers or major swap
21 participants. The rules would apply to SD MSPs
22 that are not subject to regulation by one of the

1 prudential regulators. That is the Fed, the OCC,
2 the FDIC, the FCA, or the FHA.

3 In developing the rules, Commission
4 staff worked closely with staff of the prudential
5 regulators. Commission staff also consulted
6 periodically with staff of the SEC and with staff
7 of foreign regulators. The rules are very similar
8 to the rules that were recently approved by the
9 prudential regulators.

10 In this presentation, I will briefly
11 touch on the following topics: The products that
12 are subject to the rules, the market participants
13 that are subject to the rules, the nature and
14 timing of margin requirements, how initial margin
15 would be calculated, what is the acceptable
16 collateral, what are the custodial arrangements,
17 what is the treatment of inter-affiliate swaps,
18 and what's the implementation schedule.

19 So turning first to products -- the
20 rules would apply to uncleared swaps entered into
21 after the effective dates of the regulation. As I
22 will describe in a few minutes, these rules would

1 be phased in and the requirements would not apply
2 retroactively to swaps entered into before the
3 applicable effective date for the parties to that
4 swap.

5 Turning to market participants -- the
6 rules would apply to those SDs and MSPs that are
7 not subject to oversight by the prudential
8 regulators. We call these firms covered swap
9 entities or CSEs. The rules would impose margin
10 requirements on (1) trades between a CSE and any
11 other swap dealer or MSP, and (2) trades between a
12 CSE and a financial end user. The rules would not
13 impose margin requirements on commercial end
14 users.

15 In January, after the proposed rules had
16 been published for comment, Congress passed
17 legislation addressing the applicability of these
18 margin rules to certain entities. The legislation
19 required the Commission and the prudential
20 regulators to issue interim final rules providing
21 that certain entities to qualify for a clearing
22 exemption will also be exempt from margin

1 requirements for their uncleared swaps. This rule
2 set includes provisions implementing that
3 requirement.

4 Turning to the nature and timing of
5 margin requirements, and turning first to initial
6 margin -- the rules would require two-way initial
7 margin -- both posting and collecting -- on a
8 daily basis for all trades between a CSE and any
9 other SD or MSP. The rules would also require
10 daily two-way initial margin for all trades
11 between a CSE and a financial end user that had
12 over \$8 billion in gross notional exposure in
13 uncleared swaps.

14 The Commission and the prudential
15 regulators had last year proposed that the
16 material swaps exposure standard be set at \$3
17 billion. In response to public comments, however,
18 the rules have raised the threshold at which
19 financial end users become subject to the initial
20 margin requirements. This provision recognizes
21 that financial end users with smaller positions do
22 not pose the same risk as those with larger

1 positions. The revised threshold is the same as
2 that recently adopted by the prudential regulators
3 and it is consistent with international standards.

4 Turning to variation margin -- the rules
5 would require daily payment of variation margin
6 for all trades between a CSE and another SD or
7 MSP. The rules would also require daily payment
8 of variation margin for all trades between a CSE
9 and a financial end user. In contrast to initial
10 margin, the gross notional threshold would not
11 apply for variation margin, so financial end users
12 with gross notional exposure below the threshold
13 would still be required to exchange variation
14 margin. Again, these requirements are the same as
15 those of the prudential regulators and consistent
16 with international standards.

17 Turning to calculation of initial margin
18 -- the rules would permit the calculation of
19 initial margin to be based on models or on a
20 standardized table. Models would be required to
21 use a 99 percent confidence level over a 10 day
22 liquidation time. The rules would permit the

1 parties to establish a \$50 million threshold below
2 which margin would not need to be collected. This
3 threshold is designed to mitigate the costs of
4 these rules while continuing to protect the
5 financial integrity of the financial system.
6 Smaller exposures would be permitted to go
7 uncollateralized, but a significant percentage of
8 all large exposures would be supported by
9 collateral.

10 The final rules include a provision
11 allowing a registered futures association to
12 approve a CSE's margin model. Commission staff
13 have communicated with NFA staff, which has
14 indicated that it will be prepared to take on this
15 responsibility. I point this out as a point of
16 distinction between the CFTC rules and the
17 prudential regulator rules where the prudential
18 regulators do not have a comparable provision
19 which would permit approval of margin models by a
20 self-regulatory organization. In their case, the
21 approval would be required to be done by the
22 prudential regulator itself.

1 So turning to acceptable collateral --
2 first, for initial margin. The rules would permit
3 initial margin to include cash, sovereign debt,
4 certain government sponsored debt, investment
5 grade debt such as corporate bonds, certain
6 equities, shares of certain money market funds,
7 and gold. This list is the same as the prudential
8 regulators' list and is consistent with
9 international standards.

10 For variation margin, the rules would
11 draw a distinction between trades that involve two
12 dealers and trades involving a dealer and a
13 financial end user. For dealer-to-dealer trades,
14 the rules would require variation margin to be in
15 cash. For trades between a dealer and a financial
16 end user, however, the rules would permit the same
17 collateral permitted for initial margin. This
18 requirement was modified in response to comments.
19 The proposal had said cash for all variation
20 margin. A number of end user commenters stated
21 that it could be very burdensome for them to post
22 cash as variation margin and so the final rule

1 would adjust the approach for variation margin for
2 trades between a dealer and a financial end user.
3 Again, the approach taken regarding acceptable
4 collateral for both initial margin and variation
5 margin is the same as the prudential regulators'
6 approach.

7 Turning to custodial arrangements -- the
8 rules would require initial margin to be held at
9 an independent custodian and it would not permit
10 rehypothecation of initial margin. Again, the
11 approach is the same as the prudential regulators'
12 approach.

13 With regard to inter-affiliate margin,
14 the rules would require the daily payment of
15 variation margin between CSEs and affiliates that
16 are also swap entities or are financial end users.
17 This aspect of the rule is the same as the
18 prudential regulators' rule. The rules, however,
19 would not require CSEs to collect initial margin
20 from affiliates except in certain circumstances
21 that I will mention in a moment. The CSEs would,
22 however, be required to have a centralized risk

1 management program to design, to monitor and
2 manage the risk associated with inter-affiliate
3 swaps on a group-wide basis. Collection would be
4 required in certain cases where the affiliate
5 enters into swaps with third parties and doesn't
6 collect margin on the outward-facing swap and then
7 does a swap with the CSE.

8 With regard to foreign regulators,
9 foreign regulators have not yet finalized their
10 rules in this area yet. Based on participation in
11 international groups and conversations with
12 foreign regulators, staff understands that a
13 number of jurisdictions are not expected to
14 require initial margin or variation margin for
15 inter-affiliate swaps if certain conditions are
16 met which would enable the parties in normal
17 circumstances to meet their obligations.

18 Finally, turning to the implementation
19 schedule -- the rules establish an implementation
20 schedule under which the requirements would be
21 phased in according to the amount of uncleared
22 swaps trading that the entity engages in. Initial

1 margin requirements would be phased in in five
2 steps beginning September 1, 2016, ending
3 September 1, 2020 -- moving from the largest
4 market participants to the smaller ones.

5 Variation margin requirements would be phased in
6 in two steps. The largest market participants
7 starting in September of 2016 and the remainder of
8 the market in March of 2017. Again, this schedule
9 is the same as the prudential regulators' schedule
10 and the schedule set forth in international
11 standards.

12 In closing, I'd like to thank the other
13 members of the staff who worked on this project --
14 Tom Smith, Rafael Martinez, Francis Kuo, Carlene
15 Kim, Paul Schlichting, Scott Mixon, Steve Kane,
16 and Lihong McPhail.

17 CHAIRMAN MASSAD: Thank you for that
18 very informative presentation. To begin the
19 Commission's discussion and consideration of this
20 rulemaking, I will now entertain a motion to adopt
21 the final rule on margin for uncleared swaps.

22 COMMISSIONER BOWEN: So moved.

1 COMMISSIONER GIANCARLO: Second.

2 CHAIRMAN MASSAD: I would now like to
3 open the floor to allow the Commissioners to make
4 any statements and ask any questions that they may
5 have. Commissioner Bowen?

6 COMMISSIONER BOWEN: Yes, thank you.
7 We've spent a lot of time together and I want to
8 thank you so much for the time that you spent with
9 me and my staff. As I understand it, though,
10 inter-affiliate swaps make up a large portion of
11 the uncleared swaps market. Could you tell us
12 what you know about the number or notional amount
13 of the trades that would require no collateral to
14 be posted?

15 MR. LAWTON: Well, first I'd say looking
16 at SDR data, we've looked at SDR data for interest
17 rate swaps and credit default swaps which we think
18 is the bulk of the market. In that case,
19 inter-affiliates trades represent about 50 percent
20 of the market. I turn it to Rafael for dollar
21 amounts if you have any off the top.

22 MR. MARTINEZ: I don't have the amount.

1 MR. LAWTON: I mean we did do some
2 estimates for individual -- well, no, I'm sorry.
3 That's a different. Yes, sorry. I don't actually
4 have dollar amounts, but it's approximately 50
5 percent of all trades for IRS and CDS.

6 COMMISSIONER BOWEN: Okay.

7 MR. LAWTON: IRS and CDS.

8 COMMISSIONER BOWEN: So if no collateral
9 is actually required for these types of trades, is
10 it likely that this rule will provide incentives
11 for dealers to increase the number of these trades
12 that are uncleared?

13 MR. LAWTON: I mean I guess I would say
14 that to the extent -- and I think they're not
15 posting IM for these trades now, we probably --
16 and so that would maintain the status quo. The
17 percentages would probably remain the same. It
18 would probably remain about 50 percent. As the
19 market got bigger, presumably if the percentage
20 stayed the same, then the amount of
21 inter-affiliate trades would grow accordingly with
22 the market. I think a related effect might be

1 that because the prudential regulators might be --
2 or would be requiring inter-affiliate IM, you
3 might see some movement of the inter-affiliate
4 business from trades involving
5 prudentially-regulated swap dealers to trades
6 involving CFTC regulated swap dealers.

7 COMMISSIONER BOWEN: As I understand it,
8 I had a number of conversations informally with
9 dealers and some -- several of them already
10 require collateral from their affiliates. So, in
11 effect, the rule that we're voting on today would
12 actually be a lower threshold -- by requiring
13 zero. Is that right?

14 MR. LAWTON: Yes. I mean to the extent
15 that dealers currently collect initial margin for
16 some inter- affiliate trades, they might be
17 following a higher standard than the rules would
18 require. I guess I should note that there's
19 various types of affiliates and the
20 inter-affiliate exception that's in this rule
21 applies to those affiliates whose financial
22 statements are consolidated. So, if an

1 affiliate's financial statement were not
2 consolidated with those of the CSE and if the
3 affiliate were a financial end user with material
4 swap exposure, it might be required -- well, it
5 would be required to post margin in that instance
6 under these rules. I mean an example of that
7 might be if a firm had some sort of money manager
8 within their corporate family, that might be the
9 sort of firm that might be posting margin. But to
10 the extent that those criteria do not apply, and
11 someone is collecting initial margin under this
12 rule, then -- I'm sorry, currently -- then this
13 rule would not require it.

14 COMMISSIONER BOWEN: Right. And, in
15 fact, in the instance of a severe, let's say,
16 financial crisis, the more collateral you would
17 have under your control, it would seem to me more
18 likely you are going to be able to meet your
19 obligations. To the extent that there's no
20 collateral here, wouldn't our swap dealer be in a
21 better position from a risk standpoint if they had
22 collected initial margin in the first instance?

1 MR. LAWTON: I mean I guess I'd start by
2 pointing out that we would require variation
3 margin to be exchanged on a daily basis. And so
4 that would -- should prevent losses from
5 accumulating over time. That being said, yes, if
6 they had additional collateral beyond that, that
7 would certainly help them.

8 COMMISSIONER BOWEN: I just also wanted
9 just to stress, you know, we are mandated to have
10 our rules -- our margin be comparable to the
11 maximum extent practicable with those of our
12 prudential regulators. Is it practicable in this
13 instance to have our CFTC regulated swap dealers
14 not to collect initial margin from their
15 affiliates?

16 MR. LAWTON: I guess I would start by
17 saying that, noting that the Act required the
18 prudential regulators to issue joint rules,
19 whereas it applied this provision that you're
20 mentioning, to the maximum extent practicable, to
21 the CFTC. So I think there was, within the Act,
22 contemplation that they wouldn't necessarily be

1 identical. And that I guess that would reflect
2 that there are differences between our general
3 statutory scheme and the banking regulators
4 general statutory scheme and between the nature of
5 some of the entities that are subject to the CFTC
6 statutory scheme and the entities that are subject
7 to the banking regulators' statutory scheme.

8 COMMISSIONER BOWEN: So do you think --
9 let's turn a little bit to the harmonization
10 question and could you describe to us how this
11 rule works with our proposed rule on cross border
12 margin, and do they work together?

13 MR. LAWTON: I guess I would suggest
14 that Paul pick that one up.

15 MR. SCHLICHTING: So, just to, I guess,
16 explain, is that we have a proposal out for the
17 cross border.

18 COMMISSIONER BOWEN: Yes.

19 MR. SCHLICHTING: Right?

20 COMMISSIONER BOWEN: Mm-hmm.

21 MR. SCHLICHTING: So, in the proposal,
22 the -- you would -- I would -- we look at it as

1 this would overlay on top of the inter-affiliate.
2 So for -- you know, and this purely on the
3 proposal. So anybody, you know -- so it's a --
4 the inter-affiliate moves trade outside, you know,
5 from the outside facing trade.

6 COMMISSIONER BOWEN: Mm-hmm.

7 MR. SCHLICHTING: If it's within one of
8 the categories in our proposal -- via day the
9 exclusion or an FCS. So if it's an exclusion,
10 then we would say those trades are excluded. If
11 it's done by an FCS, the outward facing trade,
12 then it would have to have substituted compliance
13 with that outward facing trade. But then when
14 they move the risk over from -- through the
15 inter-affiliate trade --

16 COMMISSIONER BOWEN: Mm-hmm.

17 MR. SCHLICHTING: -- well, that would
18 all depend on. So if it was excluded -- the
19 outward facing trade -- then we only apply VM --
20 variation margin on the inter-affiliate trade.
21 But from the other side, from the FCS, it would be
22 -- is it substituted compliance on the outward

1 facing trade. And, again, so there would be a
2 collection of IM in that situation because we
3 would have to do a comparability. And if it's
4 comparable, then either they can use the foreign
5 jurisdiction's margin rules or ours, which
6 requires outward facing trades on IM for FCSs.
7 And then when they move it over through the
8 inter-affiliate trade, it would be VM. So, that's
9 how it would apply. But, again, it's still just a
10 proposal in the cross border sense. And, you
11 know, we will look at -- you know, because I think
12 we made assumptions based on the proposed margin
13 rule that we're adopting here on how the
14 inter-affiliate worked. Because initially the
15 proposal was post collect, so maybe, you know, we
16 just have to reexamine how that exclusion works
17 and whether John's anti -- well, I guess the
18 anti-evasion rule that's in the margin rule, we're
19 saying that if you do an outward facing trade in a
20 jurisdiction that does not require IM, then IM has
21 to be collected by the CSE, well we may have to
22 reexamine how that interplays with the cross

1 border.

2 CHAIRMAN MASSAD: Can I just ask the
3 staff -- be sure you talk very close to the
4 microphone. There's some trouble hearing you in
5 the back.

6 COMMISSIONER BOWEN: So back when we
7 were talking about the proposed cross border
8 margin rules, I know we talked about our concern
9 about de-guaranteeing and all the sophisticated
10 players used words to de-guarantee. Given this
11 rule, we don't have to worry about that anymore,
12 do we? That notion goes away since there will be
13 no margin that needs to be collected?

14 MR. SCHLICHTING: Well, the
15 de-guaranteeing -- that would go -- that's for the
16 inter-affiliate transactions, but the actual
17 outward facing trade --

18 COMMISSIONER BOWEN: Mm-hmm.

19 MR. SCHLICHTING: -- I mean, that -- I
20 mean in the proposal, we -- you know, the
21 Commission adopt -- well, the proposal says that
22 if you are a foreign consolidated sub, you still

1 have to collect margin on the outward facing
2 trade. So -- and -- so the guaranteeing is
3 separate and distinct from that. And, but as I
4 said before, I think the exclusion though is maybe
5 something to reexamine, so -- because if you had a
6 foreign -- a non-U.S. CSE does a trade with a
7 non-U.S. Person --

8 COMMISSIONER BOWEN: Mm-hmm.

9 MR. SCHLICHTING: -- that would be
10 excluded from the rule totally. And then when you
11 transfer -- even with that anti-evasion -- so the
12 anti-evasion that's built into the
13 inter-affiliate, that's still excluded out. So
14 then when they do the -- so how the anti-evasion
15 should have worked was, in that sense, there
16 should have been a collection when the
17 inter-affiliate trade occurs. But since it was
18 already excluded out, it doesn't even look at
19 that. So that's something we just need to
20 reexamine.

21 COMMISSIONER BOWEN: Okay. Thank you.

22 MR. MARTINEZ: Commissioner, if I may,

1 one note, a moment ago when we mentioned about 50
2 percent of the swaps market was inter-affiliate.
3 I want to note that's sort of an upper bound. And
4 one of the --

5 COMMISSIONER BOWEN: I'm sorry, Rafael.
6 I'm sorry I missed the verb again.

7 MR. MARTINEZ: In one of your first
8 questions you asked about the size of the
9 inter-affiliate market, and we said that of the
10 swaps market, our estimate is that 50 percent of
11 the swaps were inter-affiliate.

12 COMMISSIONER BOWEN: Mm-hmm.

13 MR. MARTINEZ: I want to clarify that
14 that's an upper bound for the swaps that would be
15 exempted from inter-affiliate margin. One of the
16 reasons that we didn't -- couldn't provide you a
17 number, specific in dollar amounts from our SDR is
18 that as we reviewed our SDR, we identified people
19 that have an ultimate parent -- that they share
20 ultimate parents or they're affiliates, but the
21 exemption, I think, in the rule goes to a very
22 specific set of entities which we refer to as

1 margin affiliates that have some conditions of
2 consolidated risk management and their
3 consolidated report, you know, accounting. And
4 that's not something that we have identified in
5 the SDR. We couldn't be that precise in the SDR
6 data to see which of the affiliates that we had
7 just because they share a common parent would
8 actually satisfy the conditions to get the
9 exemption. So the 50 percent would be an upper
10 bound, but we couldn't really give you more
11 precise numbers from that.

12 CHAIRMAN MASSAD: Commissioner
13 Giancarlo?

14 COMMISSIONER GIANCARLO: Thank you. My
15 written statement on this rule contains numerous
16 observations and comments. I just want to
17 highlight a few. I don't have questions, but I do
18 want to say a few things. First, I want to note
19 that the threshold for measuring material swaps
20 exposure has been raised from three billion to
21 eight billion, which brings our requirement
22 roughly in line with the IOSCO standard of eight

1 billion Euro.

2 I'm also pleased that the swaps of
3 commercial end-users, agricultural and energy
4 cooperatives that are classified as financial
5 institutions and small banks will not be subject
6 to the margin requirements if they qualify for an
7 exclusion or exemption. And I think that's one
8 small assist to America's remaining small banks to
9 get their heads back above water in the toppling
10 wave of the Dodd-Frank Act.

11 I disagree, however, with the definition
12 of financial end-user, which is overly broad in
13 the rule. It includes entities that are unlikely
14 to act as counterparties to swaps, such as floor
15 brokers, introducing brokers, and futures
16 commission merchants acting on behalf of
17 customers, among others. These entities may not
18 ultimately be captured by the rule because they're
19 unlikely to have material swaps exposure
20 triggering application, but I question the logic
21 behind their inclusion. Good regulation means
22 precisely crafted rules, not ones that are

1 deliberately overly-broad.

2 I also continue to object to the 10-day
3 liquidation horizon that must be incorporated into
4 initial margin models for all types of uncleared
5 swaps. The 10-day requirement is a made up
6 number. It's not tailored to the true liquidity
7 profile of the underlying swaps instruments. We
8 must revisit this issue as we gain more experience
9 with initial margin models.

10 In addition, I remain concerned about
11 the cross-border implications for this rule, which
12 remain unfinished because they were proposed
13 separately from the rule finalized today. An
14 appropriate framework for cross-border application
15 of margin requirements for uncleared swaps is
16 essential if we are to preserve the global nature
17 of the swaps market. We must avoid further
18 fragmenting markets by imposing another regulatory
19 framework that is inconsistent, confusing, or
20 burdensome. Doing so will only result in yet
21 another competitive disadvantage between American
22 institutions and their international counterparts.

1 And I close by again commending the team
2 -- John, you and your team -- for your hard work,
3 thoroughness, and ultimately the improved
4 rulemaking that is before us today. Thank you.

5 CHAIRMAN MASSAD: Thank you. I'd like
6 to follow up just on a few points to make sure we
7 understand and the audience also understood.
8 Rafael, you were talking about the data on
9 inter-affiliate swaps. So just to be clear, what
10 you were saying is right now, our SDR data --
11 frankly, I think, we're estimating, first of all,
12 how much of it is in inter-affiliate swaps. We
13 have to figure out who is related to whom
14 manually. We don't really have accurate data on
15 that. But, more importantly, when we're talking
16 about not requiring initial margin on
17 inter-affiliate swaps, we are only talking about
18 those swaps between the consolidated affiliates.
19 So, for example, if there is an investment fund
20 managed by an affiliate, that swap is treated as a
21 third party affiliate -- or a third party entity.

22 MR. LAWTON: That's right.

1 CHAIRMAN MASSAD: If there is a less
2 than 50 percent owned entity, which is not
3 consolidated, that is treated as a third party
4 swap. So, we have no real sense of the
5 distinction between, you know, the amount of those
6 kinds of swaps and the amount of the consolidated
7 swaps. Is that correct?

8 MR. LAWTON: That's correct. Yes, that
9 there's some difficulty in identifying who is an
10 affiliate and then once you do identify who is an
11 affiliate, there is some difficulty in identifying
12 whether they're a consolidated affiliate or not.

13 CHAIRMAN MASSAD: Okay. And just to go
14 back to the de-guaranteeing issue, the
15 de-guaranteeing issue goes to guarantees on
16 outward facing trades. Is that right, Paul?

17 MR. SCHLICHTING: Yes, that's correct.

18 CHAIRMAN MASSAD: And our -- I think you
19 were saying our proposal on the cross border deals
20 with that by saying the application of our margin
21 rule to those outward facing trades doesn't turn
22 on whether there's a guarantee, it simply turns on

1 whether the entity is consolidated.

2 MR. SCHLICHTING: That's correct.

3 CHAIRMAN MASSAD: So, the
4 inter-affiliate -- whether we require initial
5 margin for inter-affiliates is unrelated to the
6 application of our cross border rule to the
7 de-guaranteeing issue?

8 MR. SCHLICHTING: On that end, yes. On
9 the outward facing, correct.

10 CHAIRMAN MASSAD: Right. Okay. I want
11 to turn to the issue of inter-affiliate
12 transactions -- talking about large institutions.
13 There's a lot of inter-affiliate transactions, I
14 assume, between these entities, right? I mean
15 which we don't even regulate. There's corporate
16 overhead allocation, sharing of leases, sharing of
17 IT, tax sharing and allocation, working capital
18 arrangements, sharing of funding. There's all
19 sorts of things, right? Okay.

20 MR. LAWTON: That's correct. Yes.

21 CHAIRMAN MASSAD: Now, here's where --
22 as I understand it, the prudential regulator

1 situation is quite different than ours because --
2 correct me if I don't have this right, but federal
3 law already requires that when you have an insured
4 depository institution engaging in an
5 inter-affiliate transaction, that transaction must
6 be fair to the insured depository institution. Is
7 that right?

8 MR. LAWTON: That's right.

9 CHAIRMAN MASSAD: And, in many cases,
10 that insured depository institution must also
11 collect collateral for that transaction -- in some
12 cases. Is that right?

13 MR. LAWTON: I believe that's right,
14 yeah.

15 CHAIRMAN MASSAD: And Dodd-Frank made it
16 clear that derivatives are now included in that.
17 Is that -- Paul, I see you nodding, but --

18 MR. SCHLICHTING: Yes, that is correct.

19 CHAIRMAN MASSAD: Okay. That framework
20 doesn't apply to us -- to our entities. Is that
21 right?

22 MR. LAWTON: That's right.

1 CHAIRMAN MASSAD: Okay. And it doesn't
2 even mean that those transactions -- those very
3 same transactions have to be fair to our entities.
4 Is that right?

5 MR. LAWTON: No. That's right.

6 CHAIRMAN MASSAD: Okay. All right. So,
7 our entities can -- I mean they have a lot of
8 things going on and we could have a margin rule
9 that says you've got to collect -- let's say it's
10 \$100 million fixed to floating swap. You've got
11 to collect and post margin. Okay. Could they
12 then -- instead of doing that, could they just
13 loan \$100 million?

14 MR. LAWTON: I'm sorry. Would the CSE
15 be --

16 CHAIRMAN MASSAD: Yeah.

17 MR. LAWTON: -- making the loan or
18 borrowing the money?

19 CHAIRMAN MASSAD: Either way.

20 MR. LAWTON: Um --

21 CHAIRMAN MASSAD: Well, let's assume
22 it's -- well, frankly, either way -- vis a vis the

1 fairness to our CSE, right? It doesn't matter.

2 MR. LAWTON: Right. I mean there would
3 presumably be capital implications, depending on
4 whether they were --

5 CHAIRMAN MASSAD: Sure.

6 MR. LAWTON: -- loaning it or borrowing
7 it.

8 CHAIRMAN MASSAD: Under our capital
9 rule, you're saying?

10 MR. LAWTON: That's right.

11 CHAIRMAN MASSAD: Yeah. Of course,
12 which all of these things could have implications
13 under our capital rule. But the point is, in --
14 that we could require margin on a \$100 million
15 fixed to floating interest rate swap where the
16 payments -- given interest rates today are, you
17 know, not all that large. Whereas, the entity
18 could loan \$100 million and not take any margin
19 for it.

20 MR. LAWTON: That's right.

21 CHAIRMAN MASSAD: Okay.

22 MR. LAWTON: I mean. Right.

1 CHAIRMAN MASSAD: The entity could also
2 collect, say, initial margin. If we required
3 initial margin, one entity could collect -- our
4 CSE could collect \$20 million let's say in
5 treasury securities from the affiliate. Right?
6 As the margin? Okay. Could it then loan those --
7 loan some other securities having a value of 20
8 million back to that affiliate without any
9 fairness or any standards on that transaction?

10 MR. LAWTON: Again, yes.

11 CHAIRMAN MASSAD: Right.

12 MR. LAWTON: The margin would have to be
13 segregated, but, yes, some -- they could do a
14 separate transaction that's --

15 CHAIRMAN MASSAD: My point is there's a
16 lot of things going on within a consolidated
17 enterprise and I think we've got to think about
18 whether imposing initial margin requirements are
19 really meaningful. Well, let me put it this way.
20 If we have concerns about internal risk
21 management, let's address them directly is my
22 point. So, let me just then say why I support

1 this rule because, you know, we're spending a lot
2 of time on inter-affiliate margin and I think it's
3 important to step back and think about the bigger
4 picture here.

5 I mean this rule is really one of the
6 most important elements of swaps market regulation
7 set forth in the Dodd-Frank Act. And I've been
8 saying that for a while. There will always be a
9 large part of the market that is not cleared, and
10 that's appropriate. But we must take steps to
11 protect against such activity posing excessive
12 risk to the system. And that is why we are
13 establishing margin requirements for uncleared
14 swaps.

15 I believe this rule is strong and
16 sensible. It requires swap dealers and major swap
17 participants to post and collect margin with
18 financial entities with whom they have significant
19 exposures. It requires initial margin, which is
20 designed to protect against potential future loss
21 on a default as well as variation margin. It
22 allows for the use of a broad range of types of

1 collateral, but only with appropriate haircuts.
2 It requires a greater level of margin than for
3 cleared swaps and it requires segregation of
4 margin with third party custodians and prohibits
5 the practice of re-hypothecation so that
6 institutions cannot use their customer's margin
7 for other purposes.

8 Another very important feature, as I
9 noted earlier, is that it exempts commercial end
10 users from the rule's requirements. Their swap
11 activities were not a source of significant risk
12 in the financial crisis, so our rule is properly
13 focused on the large institutions who engage in
14 most of the uncleared swaps activity.

15 Now, since I've been in office, you
16 know, I hear a lot from people about the fact that
17 rules on swaps internationally are not harmonized.
18 And so, shortly after I took office, I committed
19 to working to make the margin rules as similar as
20 we could because, again, they are such an
21 important piece of this framework. And our rule
22 today is practically identical to those of the

1 United States banking regulators and substantially
2 similar to international rules. And I want to
3 congratulate the staff, because I know that took a
4 lot of work to get to where we are, but that is a
5 very important accomplishment.

6 Now, the rule is really designed to
7 reduce the risk that a covered swap entity default
8 leads to further defaults by its counterparties.
9 And given the interconnectedness of our financial
10 system, that's an extremely important thing. We
11 became all too familiar with that risk in 2008.
12 Now the issue of how the rule applies to
13 inter-affiliate transactions is really a separate
14 issue. It's received a lot of attention. And I
15 first want to say that, you know, the differences
16 in our views on inter-affiliate margin do not
17 reflect differences in our respective level of
18 concern about the safety of the system or about
19 avoiding the problems of the past.

20 I spent five years at Treasury helping
21 this country dig out from the financial crisis and
22 a lot of that time was spent on dealing with AIG.

1 And I think our differences, instead, reflect
2 differences in our analysis of what is the purpose
3 of initial margin -- particularly in the
4 inter-affiliate context -- and what would it
5 accomplish or not accomplish. And so I believe
6 we've got to look at this issue first in terms of
7 the basic goal of the rule, which is to avoid the
8 potential for the buildup of excessive risk from
9 bilateral transactions between unaffiliated
10 parties. Inter-affiliate transactions are not
11 outward facing. They do not increase the risk --
12 the overall risk exposure of the consolidated
13 enterprise to third parties. And instead they are
14 typically a means for the consolidated enterprise
15 to centrally manage risk related to the activities
16 of multiple subsidiaries -- as it does with a
17 whole host of activities.

18 So we must make sure that
19 inter-affiliate transactions are not used as a
20 loophole or as a means to escape the basic and
21 very strong requirements of this rule to collect
22 margin in transactions from third parties. And we

1 have done that. We have imposed a very strong
2 anti-evasion standard. As we have said, a covered
3 swap entity is required to collect margin from an
4 affiliate if that affiliate is directly or
5 indirectly engaging in an outward facing swap in a
6 situation where it should be, but is not
7 collecting margin. And, in addition, as it was
8 noted, our proposal on the cross border
9 application of our margin rule, which is the
10 subject of a separate rulemaking, also addresses
11 this because that provides that any affiliate that
12 is consolidated with a U.S. parent is subject to
13 requirements to collect margin from third parties
14 no matter where that affiliate is located and
15 whether or not it is guaranteed by the U.S.
16 Parent. I'm hoping that we can finalize that part
17 of the rule early next year.

18 Now, second, we have required the
19 exchange of variation margin in all
20 inter-affiliate swaps. And this provides mark to
21 market protection to both sides and prevents the
22 buildup of the liability owed by one affiliate to

1 another. And, third, we've required that
2 inter-affiliate swaps be subject to a centralized
3 risk management program that is reasonably
4 designed to monitor and manage the risks
5 associated with such transactions. And I think at
6 times, we're suggesting that we should use
7 inter-affiliate margin -- initial margin -- to
8 enhance that risk management -- that internal risk
9 management. I think that would be a very costly,
10 and not necessarily effective way, to do that,
11 because of the examples I've cited and because of
12 the complexity of that internal risk management.
13 If we are concerned -- if there is a concern about
14 the adequacy of internal risk management --
15 centralized risk management -- we should address
16 it directly, not by imposing the requirements of a
17 rule that is designed for trades with unaffiliated
18 parties.

19 I would also note that the rule is
20 generally consistent with the rule adopted by the
21 Commission in 2013, exempting inter-affiliate
22 transactions from the clearing mandate. If you go

1 back and look, you will see the Commission
2 explicitly considered whether to require initial
3 margin or variation margin in the context of
4 inter-affiliate transactions at that time and
5 decided that it would not do so. It would not
6 require those as a condition of using the
7 inter-affiliate exemption from clearing. If we
8 were to do so today, that would effectively
9 undercut the inter-affiliate exemption from
10 clearing.

11 So, I address other aspects of the rule
12 in my written statement, but, in short, I believe
13 this rule is a strong and sensible approach that
14 will contribute to the strength and resiliency of
15 our financial system. Thank you.

16 If there are no other questions, I would
17 again like to thank the staff for all their work
18 and their presentations. And I would like to ask
19 if any Commissioner would like to make any further
20 statements before we proceed to a vote? Okay. I
21 would then ask Mr. Kirkpatrick to call the roll.

22 MR. KIRKPATRICK: The motion now before

1 the Commission is on the adoption of the final
2 rulemaking on margin requirements for uncleared
3 swaps for swap dealers and major swap
4 participants. Commissioner Giancarlo?

5 COMMISSIONER GIANCARLO: Aye.

6 MR. KIRKPATRICK: Commissioner
7 Giancarlo, aye. Commissioner Bowen?

8 COMMISSIONER BOWEN: No.

9 MR. KIRKPATRICK: Commissioner Bowen,
10 no. Chairman Massad?

11 CHAIRMAN MASSAD: Aye.

12 MR. KIRKPATRICK: Chairman Massad, aye.
13 Mr. Chairman, on this matter the ayes have two,
14 the no's have one.

15 CHAIRMAN MASSAD: The ayes have it and
16 the motion to adopt the final rule is approved.
17 Is there any other Commission business? There
18 being no further business, I would entertain a
19 motion to adjourn the meeting.

20 COMMISSIONER BOWEN: So moved.

21 COMMISSIONER GIANCARLO: Second.

22 CHAIRMAN MASSAD: All those in favor,

1 say aye.

2 COMMISSIONER BOWEN: Aye.

3 COMMISSIONER GIANCARLO: Aye.

4 CHAIRMAN MASSAD: Okay. The ayes have
5 it. Again, I want to thank the CFTC staff for all
6 their work and on behalf of all of us at the
7 Agency, I want to wish everyone a happy holiday
8 with family and friends and a wonderful new year.
9 Thank you.

10 (Whereupon, at 12:17 p.m., the
11 PROCEEDINGS were adjourned.)

CERTIFICATE OF NOTARY PUBLIC

DISTRICT OF COLUMBIA

I, Carleton J. Anderson, III, notary public in and for the District of Columbia, do hereby certify that the forgoing PROCEEDING was duly recorded and thereafter reduced to print under my direction; that said transcript is a true record of the testimony given by witnesses; that I am neither counsel for, related to, nor employed by any of the parties to the action in which this proceeding was called; and, furthermore, that I am not a relative or employee of any attorney or counsel employed by the parties hereto, nor financially or otherwise interested in the outcome of this action.

(Signature and Seal on File)

Notary Public, in and for the District of Columbia
My Commission Expires: March 31, 2017
