## CFTC Technical Specification

Parts 43 and 45 swap data reporting and public dissemination requirements

August 30, 2022 March 1, 2023

Version 3.23.1

The Parts 43/45 Technical Specification v3.1 changes (provided in redline form) must be implemented no later than fune 30, 2023January 29, 2024.

## 1 Introduction

### 1.1 Background

Under the Dodd-Frank Wall Street Reform and Consumer Protection Act, the CFTC passed several data-related swaps rules, including 17 CFR parts 43 and 45 , which mandated the reporting of swap data contracts to SDRs and the public dissemination of swap data, with the goal of bringing transparency to a previously opaque swaps market.

Internationally, in 2009 the G20 leaders agreed that all over-the-counter (OTC) derivatives contracts should be reported to trade repositories (TRs) ${ }^{1}$ to further the goals of improving transparency, mitigating systemic risk and preventing market abuse. Aggregation of the data being reported across TRs would help authorities to obtain a comprehensive view of the OTC derivatives market and its activity. In September 2014, the Financial Stability Board (FSB) published the Aggregation Feasibility Study Group (AFSG) report, endorsing certain recommendations relating to the aggregation of TR data, including developing global guidance on harmonization of data elements that are reported to TRs and are important to global aggregation across jurisdictions. The CPMI-IOSCO working group for harmonization of critical OTC derivatives data elements was set up to implement some of the key recommendations of the 2014 FSB AFSG report and has developed global guidance regarding the definition, format and usage of critical OTC derivatives data elements reported to TRs, including the unique transaction identifier (UTI), the unique product identifier (UPI) and other critical data elements (also known as CDE).
The CFTC's Technical Specification uses the Revised CDE Technical Guidance - version 2: Harmonisation of critical OTC derivatives data elements (other than UTI and UPI)² (referred to as CDE Technical Guidance), as its base, with a majority of the data elements sourced from this CDE Technical Guidance.

This Technical Specification provides the definition, format, allowable values and validation rules for the data elements that are required to be reported to the SDRs by reporting parties under the revised part 45 rule. For data elements in the CDE Technical Guidance ("CDE data elements") adopted by the CFTC (the data element name, definition, format, and allowable values), the CFTC has taken them on as written/prescribed by CDE. Where additional guidance is needed for CFTC reporting requirements, that guidance is provided in a footnote for that data element. This Technical Specification also provides the data elements required to be reported and publicly disseminated under the part 43 rule, and any dissemination requirements for SDRs for public reporting.
Please forward questions regarding format, content, and transmission of part 43 and part 45 data submissions to CFTC at CFTCSwapsTechSpec@CFTC.gov.

### 1.2 Structure and Description of Column Headings

The Technical Specification and Validation Rules table starting on page 1 contains two main areas: Technical Specification and Validation Rules and Dissemination Rules. The details of these main areas are described in this section below.

### 1.2.1 Technical Specification

[^0](1) \#: all data elements are assigned a number for ease of reference. The data element number is referenced throughout the document and in the part 43 and part 45 rule appendices.
(2) Source: this column will contain either "CDE" or "CFTC". "CDE" refers to a data element in the published CDE Technical Guidance. "CFTC" refers to a data element not in the published CDE Technical Guidance and sourced from the CFTC.
(3) Category: data elements are grouped by topic or category.
(4) Data Element Name: data element names used in this document may be, but are not required to be used literally.
(5) Definition for Data Element: for CDE data elements, the definition is sourced from the CDE Technical Guidance, with footnotes added to provide clarity based on the CFTC's jurisdictional requirements.
(6) Format: see Table 1 below that illustrates the meaning of formats used throughout the Technical Specification.

| Format | Content in brief | Additional Explanation | Example(s) |
| :---: | :---: | :---: | :---: |
| YYYY-MM-DD | Date | YYYY = four-digit year <br> $M M=$ two-digit month <br> DD = two-digit day | 2015-07-06 <br> (corresponds to 6 July 2015) |
| YYYY-MMDDThh:mm:ssZ | Date and time | YYYY, MM, DD as above <br> hh = two-digit hour (00 through 23) (am/pm NOT allowed) <br> $\mathrm{mm}=$ two-digit minute ( 00 through 59) <br> ss = two-digit second (00 through 59) <br> T is fixed and indicates the beginning of the time element. <br> $Z$ is fixed and indicates that times are expressed in UTC <br> (Coordinated Universal Time) and not in local time. | 2014-11-05T13:15:30Z (corresponds to 5 November 2014, 1:15:30 pm, Coordinated Universal time, or 5 November 2014, 8:15:30 am US Eastern Standard Time) |
| Num( $\mathbf{2 5 , 5}$ ) | Up to 25 numerical characters including up to five decimal places | The length is not fixed but limited to 25 numerical characters including up to five numerical characters after the decimal point. <br> Should the value have more than five digits after the decimal, reporting counterparties should round half-up. | 1352.67 12345678901234567890.12345 1234567890123456789012345 0 -20000.25 -0.257 |
| Num(5) ${ }^{3}$ | Up to five numerical characters, no decimals are allowed | The length is not fixed but limited to five numerical characters. | $\begin{aligned} & 12345 \\ & 123 \\ & 20 \end{aligned}$ |
| Char(3) | Three alphanumeric characters | The length is fixed at three alphanumeric characters. | $\begin{aligned} & \text { USD } \\ & \text { X1X } \\ & 999 \end{aligned}$ |
| Varchar(25) | Up to 25 alphanumeric characters | The length is not fixed but limited at up to 25 alphanumerical characters. No special characters are permitted. If permitted, it would be explicitly stated in the format of the data element. | asgaGEH3268EFdsagtTRCF543 <br> aaaaaaaaaa <br> x |
| Boolean | Boolean characters | Either "True" or "False" | True <br> False |

Table 1 - Explanation of formats used in the Technical Specification

[^1](7) Allowable Values: for each of the data elements, where applicable, only the specified allowable values are acceptable for submission to the SDRs. Any reported value that is not in the allowable values list should be rejected by the SDRs' data validation procedures. If the allowable value specifies a predefined structure such as LEI ${ }^{4}$ code followed by an identifier (i.e., Natural person identifier), the SDR's validation must also include a check to ensure the LEI code is published by the GLEIF.
(8) Validation Rules and Dissemination Rules: see section 1.2.2 below.

### 1.2.2 Validation Rules and Dissemination Rules

This section explains the columns in (8) Validation Rules and Dissemination Rules. Nothing in this Technical Specification should be read to prohibit an SDR from limiting the number of data
 Action Types.

| (8) Validation Rules and Dissemination Rules |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { (8a) } \\ \text { P43/P45 } \end{gathered}$ <br> Asset Class |  |  |  |  |  | (8b) <br> Part 45 SDR Validation Rules |  |  | (8e) |
| ¢ | $\cong$ | x | x | \% | 8 |  |  |  | Part 43 SDR Validation and Dissemination Rules |

(8a) P43/P45 Asset Class: These five columns specify which asset class each data element is required to be reported. As the Commission stated in the swap reporting final rules, "[u]ntil the Commission designates a UPI pursuant to $\S 45.7$, SDRs will continue to report, the product-related data elements unique to each SDR." ${ }^{6}$ - Because of that, asset class should be determined by referencing the Technical Guidance, Harmonisation of the Unique Product Identifier7 (referred to as UPI Technical Guidance). The Technical Guidance, Harmonisation of the Unique Product Identifier ${ }^{8}$ UPI Technical Guidance (referred to as UPI Technical Guidance) refers to UPI reference data elements, including Asset Class, which is defined as an indication of "whether the asset, benchmark or another derivatives contract underlying a derivatives contract is, or references, an equity, rate, credit, commodity or foreign exchange asset." These columns are applicable to publicly disseminated transactions (part 43) and both transaction reporting and end-of-day reporting (part 45).
For this Technical Specification, $C R=$ credit, $I R=$ rates, $F X=$ foreign exchange, $E Q=$ equities and $C O=$ commodities.
(8b) Part 45 SDR Validation Rules: In accordance with §_49.10(c), Duty to validate SDR data. This column specifies the validation rule(s) the SDRs must apply to each data element for transaction reporting, and end-of-day valuation and collateral reporting for all asset classes. The validation rules in this column are the minimum conditions that must be met. It is possible the data element may be reported for scenarios outside of what is listed in the validation rules column (for example, a value may be provided where there is an else \{blank\}. It may be interpreted as "else optional"). The validation rules may vary by asset class, transactions, and end-of-day submissions. For certain data elements, additional cross validation with other related data element(s) is also specified. For product-specific validation rules, see section 1.4 below.

[^2](8c) P45 End of Day: This column specifies the data elements that are required for end-of-day ( $\epsilon$ Collateral orand $v$ Valuation) reporting with a " Y " or " N ".
(8d) P43 Reported: In accordance with part 43 rule, SDRs must publicly disseminate certain swap transaction and pricing data to enhance transparency and price discovery. This column indicates the data elements required to be reported to the SDR with a " Y ", and those not required to be reported with an " N ".
(8e) Part 43 SDR Validation and Dissemination Rules: For the data elements that are required to be publicly disseminated, and in accordance with §_49.10, this column specifies validation rules that the SDR must perform and certain rules that must be applied by the SDR when disseminating to the public. The SDR disseminating the data, per their own procedures, must round and cap the reported notional or principal amount pursuant to § 43.4 . When notional or principal amount is capped, the SDR must proportionally scale other applicable fields that are disseminated to avoid fingerprinting and distortion.
In order to increase consistency in reporting and improve the quality of swap data maintained at SDRs, a set of validation rules have been prescribed for each data element for all swap reporting. The SDRs are required to apply these validations as part of SDR's acceptance of data pursuant to §_49.10(c) - Duty to validate SDR Data. Each data element is prescribed with Mandatory, Conditionally mandatory, Optional, and Not required along with validation rules. Below Table 2 provides definitions for each validation code.

| Value | Definition |
| :---: | :--- |
| M | Mandatory: The data element is strictly required. Any additional validation rules must also <br> be applied, if specified. |
| C | Conditionally mandatory: The data element is required if the specific conditions set out in <br> the validation rules are met. Any additional validation rules must also be applied, if <br> specified. |
| O | Optional: The data element shall be reported if applicable for the transaction. Any <br> additional validation rules specified may be applied, when populated. |
| NR | Not required: The data element is not required to be reported. |

Table 2 - Definitions of validations

### 1.3 Explanation of Data Element or Category

### 1.3.1 Direction

| The CDE Technical Guidance provides two options/approaches for reporting Direction ${ }_{2}^{9}=$ The CFTC has adopted the Buyer/Seller and Payer/Receiver approach and not the Direction $1 /$ Direction 2 approach. The reporting counterparty should NOT report both Buyer/Seller and Receiver/Payer for a given transaction but instead adopt the appropriate data element(s) for the type of instrument reported.

### 1.3.2 Notional amount schedules

For the Notional amount schedule related data elements (\#33-\#35), the reporting counterparty must adhere to the implementation procedures established by the SDR

[^3]https://www.leiroc.org/publications/gls/roc 20210922.pdf

### 1.3.3 Repeating data elements or leg-based products

 which could be reported as Notional amount-leg 1 and Notional amount-leg 2 by the submitter depending on the applicability to the product. Unless the data element is listed as "Leg," it cannot
 based data elements are meant to apply to the first leg (Leg 1). It should not, however, be presumed the validations apply to the second leg (Leg 2 ) similarly. This is due in large part to the conditionality between leg fields and in light of the fact that SDR-specific data elements can alter the application of the published validations in ways not contemplated in the Technical Specification. Given this, SDRs may incorporate other validations for leg-level data elements, should they deem it necessary. For products where the multi-leg or multi-stream concept is not applicable, report values in the designated data element for the first leg (Leg 1 ) for all fields that are specified as leg-based data elements.

### 1.3.4 Reporting multiple values

Data elements that require reporting of multiple values in a single data element can be reported using a delimiter between the reported values. An example below uses a semi-colon for Clearing
 procedures established by the SDR to whom it reports.

| Data element | Reported values | Explanation |
| :---: | :--- | :--- |
| Clearing swap UTI | LCZ7XYGSLJUHFXXNXD88123456789; LCZ7XYGSLJUHFXXNXD880000000111 | 2 UTIs separated by ';' and each reported value passes validation <br> rules for format and allowable value of the data element |

Table 3 - Example showing how multiple values can be reported

### 1.3.5 Events category

Harmonization of data elements related to lifecycle events was not included in the CDE Technical Guidance but is required under CFTC swaps reporting. Reporting of swaps life cycle events is identified by the combination of the action taken (Action type [\#26]) for a transaction and the reason (Event type [\#27]) for the action. Related transactions are linked using unique identifiers; for example, Prior USI [\#100] and Prior UTI [\#101] are used for linking one-to-one and one-to-many relationship between transactions. Event identifier [\#29] is also used for linking many-to-many relationship between transactions for specified situations.
 Event type combinations should be used to report various events.

### 1.3.6 Payments category - Other payments

A number of the data elements in the 'Payment' category (CDE data elements Other payment type [\#57], Other payment amount [\#58], Other payment currency [\#59], Other payment date [\#60], Other payment payer [\#61], and Other payment receiver [\#62]) capture some types of payments linked to the derivative transaction but that are not regular periodic payments. This set of data elements could be reported multiple times in the case of multiple payments.

| Unique transaction id | Other payment amount 1 | Other payment type 1 | Other payment currency 1 | Other payment date 1 | Other payment payer 1 | Other payment receiver 1 | Other payment amount 2 | Other payment type 2 | Other payment currency 2 | Other payment date 2 | Other payment payer 2 | Other payment receiver 2 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| LEIRCP-1111 | 100000 | UWIN | CCY | 2019-03-01 | LEI-COUNTERPTY1 | LEI-COUNTERPTY2 | 50000 | PEXH | CCY | 2019-03-01 | LEI-COUNTERPTY1 | LEI-COUNTERPTY2 |

### 1.3.7 Offshore Currency

There are multiple currency data elements in the Technical Specification that reference ISO 4217, but ISO 4217 does not include a method to report off-shore currency. The Settlement location (\#90) data element helps differentiate the onshore currency from the offshore currency. For example, an FX swap transaction that involves an "offshore currency" such as Chinese Yuan (Renminbi) trading in offshore market (i.e., Hong Kong), the ISO 4217 currency code for Chinese Yuan Renminbi, CNY, is required to be reported along with Settlement location data element (see below).

| Notional currency | Settlement location |
| :---: | :---: |
| CNY | HK |

The offshore currency for CNY is often represented as 'CNH' in the marketplace, but it is not an official ISO currency code, so it should not be reported.

### 1.4 Unique Product Identifier (UPI) ${ }^{10}$

The term "Unique product identifier" as used in this Technical Specification corresponds to the term "UPI code" in the UPI Technical Guidance ${ }^{11}$.
 "[u]ntil the Commission designates a UPI pursuant to $£ 45.7$, SDRs will continue to report, the product-related data elements unique to each SDR" ${ }^{12}$ - (although a UPI issuer has been announced) ${ }^{13}$ :

Also, to further clarify, the term "Unique product identifier" as used in the Technical Specification corresponds to the term "UPI code" in the UPI Technical Guidance.
 data element that it receives for that product attribute.
These validation rules are specified for transaction, collateral, and valuation reporting in column (8b), Part 45 SDR Validation Rules.
The convention used to reference UPI reference data elements in the validation rule is "UPI.[reference data element name]". In the example below, it uses UPI reference data element, Instrument Type, from UPI Technical Guidance to specify whether a transaction is an option transaction.

### 1.4.1 Reporting to an SDR for the Credit, Rates, FX and Equities asset classes ${ }^{14}$

For the Credit, Rates, FX and Equities asset classes, report the Unique Product Identifier (UPI) [\#87].

[^4]
### 1.4.2 Reporting to an SDR for the Commodities asset class

For the Commodities asset class, report product-related data elements as specified by the relevant SDR until the Commission designates a UPI pursuant to $\S 45.7$ for the Commodities asset class.

### 1.4.3 Validation rules

Product specific validation rules are based on the UPI reference data elements as provided by UPI service provider ${ }^{15}$ and defined in ISO 4914 Standard. ${ }^{16}$ Until the Commission designates a UPI for the Commodities asset class, each SDR should implement the validation rules based on that SDR's equivalent data element that it receives for that product attribute.
These validation rules are specified for transaction, collateral, and valuation reporting in column (8b), Part 45 SDR Validation Rules.
The convention used to reference UPI reference data elements in the validation rule is "UPI.[reference data element name]". In the example below, it uses UPI reference data element, Instrument Type, from the ISO 4914 Standard to specify whether a transaction is an option transaction. ${ }^{17}$

| Data element name | Validation rule | Explanation |
| :--- | :--- | :--- |
| First exercise date <br> Eallamount | C if UPI.[Instrument type] = 'Option', else <br> \{blank\} | 'First exercise date' Call amount is conditionally required to be <br> populated if the transaction is an option, otherwise, it can be blank. |

Table 6 - Example of product specific validation rule

### 1.4.4 Public Dissemination

For the Credit, Rates, FX, and Equities asset classes, SDRs will publicly disseminate the UPI along with the UPI Service Provider issued FISN [\#D4] and UPI Underlier Name [\#D5]. For the
Commodities asset class, SDRs will continue to publicly disseminate the product-related data elements unique to each SDR until the Commission designates a UPI for the Commodities asset class.

[^5]2 Technical Specification and Validation Rules

| Technical Specification |  |  |  |  |  |  | Validation Rules and Dissemination Rules |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

|  |  |  |  | Correct: An action that corrects erroneous data of a previously submitted transaction. <br> Error: An action of cancellation of a wrongly submitted entire transaction in case it never came into existence or was not subject to part 43/part 45 reporting requirements but was reported erroneously, or a cancellation of duplicate report. <br> Terminate: An action that closes an existing transaction because of a new event (e.g., Compression, Novation). This does not apply to transactions that terminate at contractual maturity date. <br> Revive: An action that reinstates a swap transaction that was reported as error or terminated by mistake. <br> Transfer out: An action that transfers swap transaction from one SDR to another SDR (change of swap data repository). <br> Valuation: An update to valuation data. There will be no corresponding Event type. <br> Collateral: An update to collateral margin data. There will be no corresponding Event type. <br> Refer to appendix F for event model sample scenarios. |  |  |  |  |  |  |  |  |  |  |  |
| 27 | CFTC | Events | Event type | Explanation or reason for the action being taken on the swap transaction. <br> Events may include, but are not limited to, trade, novation, compression or risk reduction exercise, early termination, clearing, exercise, allocation, clearing and allocation, credit event, and transfer. <br> Trade: A creation or modification of a transaction. <br> Novation ${ }^{\text {38: }}$ A novation legally moves partial or all of the financial risks of a swap from a transferor to a transferee and has the effect of terminating/modifying the original transaction and creating a new transaction to identify the exposure between the transferor/transferee and remaining party. <br> Compression or Risk Reduction Exercise: Compressions and risk reduction exercises generally have the effect of terminating or modifying (i.e., reducing the notional value) a set of existing transactions and of creating a set of new transaction(s). These processes result in largely the same exposure of market risk that existed prior to the event for the counterparty. <br> Early termination: Termination of an existing swap transaction prior to scheduled termination or maturity date. <br> Clearing: Central clearing is a process where a derivatives clearing organization interposes itself between counterparties to contracts, becoming the buyer to every seller and the seller to every buyer. It has the effect of terminating an existing | Char(4) | - TRAD = Trade <br> - NOVA = Novation <br> - COMP = Compression or Risk <br> Reduction <br> - ETRM = Early termination <br> - CLRG = Clearing <br> - EXER = Exercise <br> - ALOC = Allocation <br> - CLAL = Clearing \& Allocation <br> - CREV = Credit event <br> - PTNG = Transfer <br> - CORP $=$ Corporate event <br> - UPDT = Upgrade | C | C | C | C | C | Transaction <br> C, for valid Action type and Event type Combination, see table in Appendix F. <br> Collateral <br> NR <br> Valuation <br> NR | N | Y | Validation <br> Same as part 45 <br> (Transaction) <br> Dissemination <br> For valid Action type and Event type Combination for public dissemination, see table in Appendix F |

## 3 Appendix

A.Additional data elements publicly disseminated - requirements for SDRs only

The following data elements are additional public dissemination requirements for the SDRs.

| \# | Category | Data Element Name | Definition for Data Element | Format | Allowable Values | Asset Class |  |  |  |  | Dissemination Rule |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  | ¢ |  |  | O |  |  |
| D1 | Dissemination Related | Dissemination identifier | SDR generated unique and random identifier for each publicly disseminated message. | Varchar(52) | Up to 52 alphanumeric characters | M | M | M | M | M |  |
| D2 | Dissemination Related | Original dissemination identifier | For action types other than "New", this identifier will hold the Dissemination identifier of the original, publiclydisseminated swap transaction and pricing data. | Varchar(52) | Up to 52 alphanumeric characters | C | C | C | C | C | C if ([Action type] = 'CORR' or 'EROR' or 'TERM' or 'REVI' or ('MODI' and [Amendment indicator] = 'True'), else \{blank\} |
| D3 | Dissemination Related | Dissemination timestamp | Date and time, to the nearest second, that an SDR publicly disseminates, as defined in $\S 43.2$. | YYYY-MMDDThh:mm:ssZ, based on UTC | Any valid date/time based on ISO 8601 Date and time format. | M |  | M | M | M |  |
| D4 | Dissemination Related | Unique product identifier short name | When the Commission designates a UPI pursuant to part 45, a humanly roadable doscription made available by the UPI issuef ${ }^{102}$ corresponding to the UPI. | A list of allowable values and their format will be published by the UP\| issuer. |  | $\begin{aligned} & \hline N \\ & \mathrm{R} \end{aligned}$ | $\begin{aligned} & \hline N \\ & \mathrm{~N} \end{aligned}$ | $\begin{aligned} & \mathrm{N} \\ & \mathrm{R} \end{aligned}$ | N $R$ $R$ | N $R$ |  |
| D4 | Dissemination Related | UPIFISN | ISO 18774 Financial Instrument Short Name issued by the UPI Service Provider | Varchar(35) | Valid ISO 18774 value | M |  | M | M | - |  |
| D5 | Dissemination Related | UPI Underlier Name | Name of the asset or index underlying the product corresponding to the UPI | A list of allowable values and the UPI Service Provider | heir format will be published by | M |  |  | M | N |  |

${ }^{102}$-Financial Stability Board designates DSB as Unique Product Identifier (UPI) Service Provider https://www.fsb.org/2019/05/fsb-designates-dsb-as-unique-product-identifier-upi-service-providert

## Appendices for part 43 and 45 Technical Specification

## B. Notional amount

From Revised CDE Technical Guidance - version 2: Harmonisation of critical OTC derivatives data elements (other than UTI and UPI) ${ }^{103}$, 2.70 Notional amount.

| Product | Converted Amount |
| :--- | :--- |
| Equity options and similar products | Product of the strike price and the number of shares or index units |
| Equity forwards and similar products | Product of the forward price and the number of shares or index units |
| Equity dividend swaps and similar products | Product of the period fixed strike and the number of shares or index units |
| Equity swaps, portfolio swaps, and similar products | Product of the initial price and the number of shares or index units |
| Equity variance swaps and similar products | Variance amount |
| Equity volatility swaps and similar products | Vega notional amount |
| Equity CFDs and similar products | Product of the initial price and the number of shares or index units |
| Commodity options and similar products | Product of the strike price, and the total notional quantity |
| Commodity forwards and similar products | Product of the forward price and the total notional quantity |
| Commodity fixed/float swaps and similar products | Product of the fixed price and the total notional quantity |
| Commodity basis swaps and similar products | Product of the last available spot price at the time of the transaction of the underlying <br> asset of the leg with no spread and the total notional quantity of the leg with no spread |
| Commodity swaptions and similar products | Notional amount of the underlying contract |
| Commodity CFDs and similar products | Product of the initial price and the total notional quantity |

Notes to the conversion table for OTC derivative transactions negotiated in non-monetary amounts:
Note 1: for transactions where the quantity unit of measure differs from the price unit of measure, the price or total quantity is converted to a unified unit of measure
Note 2: if applicable to the transaction, the notional amount reflects any multipliers and option entitlements.
Note 3: for basket-type contracts, the notional amount of the transaction is the sum of the notional amounts of each constituent of the basket.
${ }^{103}$ Revised CDE Technical Guidance - version 2: Harmonisation of critical OTC derivatives data elements (other than UTI and UPI), https://www.leiroc.org/publications/gls/roc_20210922.pdf

# Appendices for part 43 and 45 Technical Specification 

## C.Mapping of Day count convention allowable values to ISO 20022, FpML, and FIX/FIXML values

From Revised CDE Technical Guidance - version 2: Harmonisation of critical OTC derivatives data elements (other than UTI and UPI) ${ }^{104}$, Annex 1 , Table 4.

| Allow able value | ISO 20022 name | ISO 20022 definition ${ }^{105}$ | $\begin{aligned} & \text { FIX/ } \\ & \text { FIXML }{ }^{106} \\ & \text { code } \\ & \text { value } \end{aligned}$ | FIX/FIXML code value description | FIX/FIXML definition | FpML 107 code | FpML definition |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A001 | IC30360ISDAor30360American BasicRule | Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February, and provided that the interest period started on a 30th or a 31st. This means that a 31st is assumed to be a 30th if the period started on a 30th or a 31st and the 28 Feb (or 29 Feb for a leap year) is assumed to be the 28th (or 29th). This is the most commonly used 30/360 method for US straight and convertible bonds. | 1 | $\begin{aligned} & 30 / 360 \\ & (30 \mathrm{U} / 360 \\ & \text { Bond Basis) } \end{aligned}$ | Mainly used in the United States with the following date adjustment rules: (1) If the investment is End-Of-Month and Date1 is the last day of February and Date2 is the last day of February, then change Date2 to 30; (2) If the investment is End-Of-Month and Date1 is the last day of February, then change Date1 to 30;(3) If Date2 is 31 and Date1 is 30 or 31 , then change Date 2 to $30 ;(4)$ If Date 1 is 31 , then change Date 1 to 30 . See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (f). [Symbolic name: ThirtyThreeSixtyUS] | 30/360 | Per 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (f) or Annex to the 2000 ISDA Definitions (June 2000 Version), Section 4.16. Day Count Fraction, paragraph (e). The number of days in the Calculation Period or Compounding Period in respect of which payment is being made divided by 360 , calculated on a formula basis as follows: Day Count Fraction = $[360 *(\mathrm{Y} 2-\mathrm{Y} 1)+30 *(\mathrm{M} 2-\mathrm{M} 1)+(\mathrm{D} 2-\mathrm{D} 1)] / 360$ " D 1 " is the first calendar day, expressed as a number, of the Calculation Period or Compounding Period, unless such number would be 31, in which case D1, will be 30; and "D2" is the calendar day, expressed as a number, immediately following the last day included in the Calculation Period or Compounding Period, unless such number would be 31 and D1 is greater than 29, in which case D2 will be $30^{108}$ |
| A002 | IC30365 | Method whereby interest is calculated based on a 30 -day month in a way similar to the 30/360 (basic rule) and a 365 -day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31 st is assumed to be the 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be the 28th (or 29th). |  |  |  |  |  |

| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A003 | IC30Actual | Method whereby interest is calculated based on a 30 -day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that the 31st is assumed to be the 30th and 28 Feb (or 29 Feb for a leap year) is assumed to be the 28 th (or 29th). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year. |  |  |  |  |  |
| A004 | Actual360 | Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 360-day year. | 6 | Act/360 | The actual number of days between Date1 and Date2, divided by 360. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (e). [Symbolic name: ActThreeSixty] | ACT/360 | Per 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (e) or Annex to the 2000 ISDA Definitions (June 2000 Version), Section 4.16. Day Count Fraction, paragraph (d). <br> The actual number of days in the Calculation Period or Compounding Period in respect of which payment is being made divided by 360 . |
| A005 | Actual365Fixed | Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 365 -day year. | 7 | $\begin{aligned} & \text { Act/365 } \\ & \text { (FIXED) } \end{aligned}$ | The actual number of days between Date 1 and Date2, divided by 365 . See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (d). [Symbolic name: ActThreeSixtyFiveFixed] | $\begin{aligned} & \text { ACT/365 } \\ & \text {.FIXED } \end{aligned}$ | Per 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (d) or Annex to the 2000 ISDA Definitions (June 2000 Version), Section 4.16. Day Count Fraction, paragraph (c). <br> The actual number of days in the Calculation Period or Compounding Period in respect of which payment is being made divided by 365 . |

| Allow able value | ISO 20022 name | ISO 20022 definition ${ }^{105}$ | $\begin{aligned} & \text { FIX/ } \\ & \text { FIXML } 106 \\ & \text { code } \\ & \text { value } \end{aligned}$ | FIX/FIXML code value description | FIX/FIXML definition | FpML 107 code | FpML definition |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A006 | ActualActuallicmA | Method whereby interest is calculated based on the actual number of accrued days and the assumed number of days in a year, i.e., the actual number of days in the coupon period multiplied by the number of interest payments in the year. If the coupon period is irregular (first or last coupon), it is extended or split into quasi-interest periods that have the length of a regular coupon period and the computation is operated separately on each quasi-interest period and the intermediate results are summed up. | 9 | Act/Act (ICMA) | The denominator is the actual number of days in the coupon period multiplied by the number of coupon periods in the year. Assumes that regular coupons always fall on the same day of the month where possible. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (c). [Symbolic name: ActActICMA] | ACT/AC <br> T.ICMA | Per 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (c). This day count fraction code is applicable for transactions booked under the 2006 ISDA Definitions. Transactions under the 2000 ISDA Definitions should use the ACT/ACT.ISMA code instead. <br> A fraction equal to "number of days accrued/number of days in year", as such terms are used in Rule 251 of the statutes, by-laws, rules and recommendations of the International Capital Markets Association (the "ICMA Rule Book"), calculated in accordance with Rule 251 of the ICMA Rule Book as applied to non-US dollardenominated straight and convertible bonds issued after 31 December 1998, as though the interest coupon on a bond were being calculated for a coupon period corresponding to the Calculation Period or Compounding Period in respect of which payment is being made. |
| A007 | IC30E360orEuroBondBasismod el1 | Method whereby interest is calculated based on a 30 -day month and a 360 -day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that the 31st is assumed to be the 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to 30 Feb. However, if the last day of the maturity coupon period is the last day of February, it will not be assumed to be the 30th. It is a variation of the $30 / 360$ (ICMA) method commonly used for eurobonds. The usage of this variation is only relevant when the coupon periods are scheduled to end on the last day of the month. | 5 | $\begin{aligned} & \hline 30 E / 360 \\ & \text { (ISDA) } \end{aligned}$ | Date adjustment rules are: (1) if Date1 is the last day of the month, then change Date1 to 30; (2) if D2 is the last day of the month (unless Date2 is the maturity date and Date2 is in February), then change Date2 to 30. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (h). [Symbolic name: ThirtyEThreeSixtyISDA] | $\begin{aligned} & \hline \text { 30E/360 } \\ & \text { ISDA } \end{aligned}$ | Per 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (h). Note the algorithm for this day count fraction under the 2006 ISDA Definitions is designed to yield the same results in practice as the version of the 30E/360 day count fraction defined in the 2000 ISDA Definitions. See Introduction to the 2006 ISDA Definitions for further information relating to this change. The number of days in the Calculation Period or Compounding Period in respect of which payment is being made divided by 360 , calculated on a formula basis as follows: Day Count Fraction $=\left[360 *(\mathrm{Y} 2-\mathrm{Y} 1)+30^{*}(\mathrm{M} 2-\right.$ M1) + (D2-D1)]/360. "D1" is the first calendar day, expressed as a number, of the Calculation Period or Compounding Period, unless such number would be 31, in which case D 1 , will be 30 ; " D 2 " is the calendar day, expressed as a number, immediately following the last day included in the Calculation Period or Compounding Period, unless such number would be 31, in which case D2 will be 30 . |

| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A008 | ActualActuallisda | Method whereby interest is calculated based on the actual number of accrued days of the interest period that fall (falling on a normal year, year) divided by 365 , added to the actual number of days of the interest period that fall (falling on a leap year, year) divided by 366 . | 11 | Act/Act (ISDA) | The denominator varies depending on whether a portion of the relevant calculation period falls within a leap year. For the portion of the calculation period falling in a leap year, the denominator is 366 and for the portion falling outside a leap year, the denominator is 365 . See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (b). [Symbolic name: ActActISDA] | ACT/AC T.ISDA | Per 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (b) or Annex to the 2000 ISDA Definitions (June 2000 Version), Section 4.16. Day Count Fraction, paragraph (b). Note that going from FpML 2.0 Recommendation to the FpML 3.0 Trial Recommendation the code in FpML 2.0 "ACT/365.ISDA" became "ACT/ACT.ISDA". <br> The actual number of days in the Calculation Period or Compounding Period in respect of which payment is being made divided by 365 (or, if any portion of that Calculation Period or Compounding Period falls in a leap year, the sum of (i) the actual number of days in that portion of the Calculation Period or Compounding Period falling in a leap year divided by 366 and (ii) the actual number of days in that portion of the Calculation Period or Compounding Period falling in a non-leap year divided by 365). |
| A009 | Actual365LorActuActubasisRul e | Method whereby interest is calculated based on the actual number of accrued days and a 365 -day year (if the coupon payment date is NOT in a leap year) or a 366 -day year (if the coupon payment date is in a leap year). | 14 | Act/365L | The number of days in a period equal to the actual number of days. The number of days in a year is 365 , or if the period ends in a leap year 366 . Used for sterling floating rate notes. May also be referred to as ISMA Year. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (i). [Symbolic name: ActThreeSixtyFiveL] | $\begin{aligned} & \hline \text { ACT/365 } \end{aligned}$ | Per 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (i). <br> The actual number of days in the Calculation Period or Compounding Period in respect of which payment is being made divided by 365 (or, if the later Period End Date of the Calculation Period or Compounding Period falls in a leap year, divided by 366). |

| Allow able value | ISO 20022 name | ISO 20022 definition ${ }^{105}$ | $\begin{gathered} \text { FIX/ } \\ \text { FIXML } 106 \\ \text { code } \\ \text { value } \end{gathered}$ | FIX/FIXML code value description | FIX/FIXML definition | $\begin{aligned} & \text { FpML } \\ & 107 \text { code } \end{aligned}$ | FpML definition |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A010 | ActualActualAFB | Method whereby interest is calculated based on the actual number of accrued days and a 366 -day year (if 29 Feb falls in the coupon period) or a 365 -day year (if 29 Feb does not fall in the coupon period). If a coupon period is longer than one year, it is split by repetitively separating full year subperiods counting backwards from the end of the coupon period (a year backwards from 28 Feb being 29 Feb , if it exists). The first of the subperiods starts on the start date of the accrued interest period and thus is possibly shorter than a year. Then the interest computation is operated separately on each subperiod and the intermediate results are summed up. | 8 | Act/Act (AFB) | The actual number of days between Date 1 and Date2, the denominator is either 365 (if the calculation period does not contain 29 February) or 366 (if the calculation period includes 29 February). See also AFB Master Agreement for Financial Transactions Interest Rate Transactions (2004) in Section 4. Calculation of Fixed Amounts and Floating Amounts, paragraph 7 Day Count Fraction, subparagraph (i). [Symbolic name: ActActAFB] | $\begin{aligned} & \text { ACT/AC } \\ & \text { T.AFB } \end{aligned}$ | The Fixed/Floating Amount will be calculated in accordance with the "BASE EXACT/EXACT" day count fraction, as defined in the "Définitions Communes plusieurs Additifs Techniques" published by the Association Francaise des Banques in September 1994. The denominator is either 365 (if the calculation period does not contain 29 February) or 366 (if the calculation period includes 29 February) - where a period of longer than one year is involved, two or more calculations are made: interest is calculated for each full year, counting backwards from the end of the calculation period, and the remaining initial stub period is treated in accordance with the usual rule. When counting backwards for this purpose, if the last day of the relevant period is 28 February, the full year should be counted back to the previous 28 February unless 29 February exists, in which case, 29 February should be used. |
| A011 | IC30360ICMAor30360basicrule | Method whereby interest is calculated based on a 30 -day month and a 360 -day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that the 31st is assumed to be the 30th and 28 Feb (or 29 Feb for a leap year) is assumed to be the 28th (or 29th). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 1 January 1999. | 4 | 30E/360 (Eurobond Basis) | Also known as 30/360.ISMA, 30S/360, or Special German. Date adjustment rules are: (1) If Date 1 falls on the 31st, then change it to the 30th; (2) If Date2 falls on the 31st, then change it to the 30th. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (g). <br> [Symbolic name: ThirtyEThreeSixty] | 30E/360 | Per 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (g) or Annex to the 2000 ISDA Definitions (June 2000 Version), Section 4.16. Day Count Fraction, paragraph ( $f$ ). Note that the algorithm defined for this day count fraction has changed between the 2000 ISDA Definitions and 2006 ISDA Definitions. See Introduction to the 2006 ISDA Definitions for further information relating to this change. |

| A012 | IC30E2360orEurobondbasismo del2 | Method whereby interest is calculated based on a 30 -day month and a 360 -day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that the 31st is assumed to be the 30th and 28 Feb of a non-leap year is assumed to be equivalent to 29 Feb when the first day of the interest period is the 29th, or to 30 Feb when the first day of the interest period is the 30th or the 31st. The 29th day of February in a leap year is assumed to be equivalent to 30 Feb when the first day of the interest period is the 30th or the 31st. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on 30 Feb when the end of the period is the 30th or the 31st, or two days of interest in February when the end of the period is the 29th, or three days of interest in February when it is 28 Feb of a non-leap year and the end of the period is before the 29th. |  |  |  |  |  |
| A013 | IC30E3360orEurobondbasismo del3 | Method whereby interest is calculated based on a 30 -day month and a 360 -day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that the 31 st is assumed to be the 30th and 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to 30 Feb. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be the 30th, even if it is the last day of the maturity coupon period. |  |  |  |  |  |

| A014 | Actual365NL | Method whereby interest is calculated based on the actual number of accrued days in the interest period, excluding any leap day from the count, and a 365-day year. | 15 | NL365 | The number of days in a period equal to the actual number of days, with the exception of leap days (29 February) which are ignored. The number of days in a year is 365 , even in a leap year. [Symbolic name: NLThreeSixtyFive] |  |  |
| A015 | ActualActualllitimo | Method whereby interest is calculated based on the actual number of days in the coupon period divided by the actual number of days in the year. This method is a variation of the ActualActualICMA method with the exception that it assumes that the coupon always falls on the last day of the month. Method equal to ACT/ACT.ISMA in the FpML model and Act/Act (ICMA Ultimo) in the FIX/FIXML model. | 10 | Act/Act (ICMA Ultimo) | The Act/Act (ICMA Ultimo) differs from Act/Act (ICMA) method only that it assumes that regular coupons always fall on the last day of the month. [Symbolic name: ActActISMAUltimo] | ACT/AC <br> T.ISMA | The Fixed/Floating Amount will be calculated in accordance with Rule 251 of the statutes, by-laws, rules and recommendations of the International Securities Market Association, as published in April 1999, as applied to straight and convertible bonds issued after 31 December 1998, as though the Fixed/Floating Amount were the interest coupon on such a bond. This day count fraction code is applicable for transactions booked under the 2000 ISDA Definitions. Transactions under the 2006 ISDA Definitions should use the ACT/ACT.ICMA code instead. |
| A016 | IC30EPlus360 | Method whereby interest is calculated based on a 30 -day month and a 360 -day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that the 31 st is assumed to be the 30 th and 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to 30 Feb. This method is a variation of the 30 E360 method with the exception that if the coupon falls on the last day of the month, change it to 1 and increase the month by 1 (i.e., next month). Method equal to ThirtyEPlusThreeSixty in the FIX/FIXML model. | 13 | 30E+/360 | Variation on 30E/360. Date adjustment rules: (1) If Date 1 falls on the 31st, then change it to the 30th; (2) If Date2 falls on the 31 st, then change it to 1 and increase Month2 by one, i.e., next month. <br> [Symbolic name: ThirtyEPlusThreeSixty] |  |  |
| A017 | Actual364 | Method whereby interest is calculated based on the actual number of accrued days in the interest period divided by 364 . Method equal to Act364 in the FIX/FIXML model. | 17 | Act/364 | The actual number of days between Date1 and Date2, divided by 364 . [Symbolic name: Act364] |  |  |

## Appendices for part 43 and 45 Technical Specification

## D.Valuation method

From Revised CDE Technical Guidance - version 2: Harmonisation of critical OTC derivatives data elements (other than UTI and UPI) ${ }^{109}$, 2.28 Valuation method.

Classification of valuation inputs

| Bucket | Input used | Valuation method ${ }^{110}$ |
| :---: | :---: | :---: |
| 1 | Quoted prices in active markets for identical assets or liabilities that the entity can access at the measurement date [IFRS 13:76/ASC 820-10-35-40]. A quoted market price in an active market provides the most reliable evidence of fair value and is used without adjustment to measure fair value whenever available, with limited exceptions. [IFRS 13:77/ASC 820-10-35-41] <br> An active market is a market in which transactions for the asset or liability take place with sufficient frequency and volume to provide pricing information on an ongoing basis. [IFRS 13: Appendix A/ASC 820-10-20]. | Mark-to-market |
| 2 | Quoted prices for similar assets or liabilities in active markets [IFRS 13:81/ASC 820-10-35-47] (other than quoted market prices included within bucket 1 that are observable for the asset or liability, either directly or indirectly) | Mark-to-market |
| 3 | Quoted prices for identical or similar assets or liabilities in markets that are not active [IFRS 13:81/ASC 820-10-35-48(b)] (other than quoted market prices included within bucket 1 that are observable for the asset or liability, either directly or indirectly). | Mark-to-model - historic prices from inactive markets should not be directly used |
| 4 | Inputs other than quoted prices that are observable for the asset or liability, for example interest rates and yield curves observable at commonly quoted intervals, implied volatilities, credit spreads [IFRS 13:81/ASC 820-10-35-48(c)] (other than quoted market prices included within bucket 1 that are observable for the asset or liability, either directly or indirectly) | Mark-to-market |
| 5 | Inputs that are derived principally from or corroborated by observable market data by correlation or other means ("marketcorroborated inputs") [IFRS 13:81/ASC 820-10-35-48(d)] (other than quoted market prices included within bucket 1 that are observable for the asset or liability, either directly or indirectly). | Mark-to-model - the inputs can be derived "principally" from observable market data, meaning that unobservable inputs can be used |
| 6 | Unobservable inputs for the asset or liability. [IFRS 13:86/ASC 820-10-35-52] <br> Unobservable inputs are used to measure fair value to the extent that relevant observable inputs are not available, thereby allowing for situations in which there is little, if any, market activity for the asset or liability at the measurement date. An entity develops unobservable inputs using the best information available in the circumstances, which might include the entity's own data, taking into account all information about market participant assumptions that is reasonably available. [IFRS 13:87-89/ASC 820-10-35-53-35-54A] | Mark-to-model - unobservable inputs are used |

## Appendices for part 43 and 45 Technical Specification

## E.Collateralisation category

From Revised CDE Technical Guidance - version 2: Harmonisation of critical OTC derivatives data elements (other than UTI and UPI) ${ }^{111}, 2.47$ Collateralisation category.

| Value | Name | $\quad$ Definition |
| :--- | :--- | :--- |$|$| UNCL | Uncollateralised | There is no collateral agreement between the counterparties or the collateral agreement(s) between the counterparties stipulates <br> that no collateral (neither initial margin nor variation margin) has to be posted with respect to the derivative transaction. |
| :--- | :--- | :--- |
| PRC1 | Partially collateralised: Counterparty 1 only | The collateral agreement(s) between the counterparties stipulates that the reporting counterparty regularly posts only variation <br> margin and that the other counterparty does not post any margin with respect to the derivative transaction. |
| PRC2 | Partially collateralised: Counterparty 2 only | The collateral agreement(s) between the counterparties stipulates that the other counterparty regularly posts only variation <br> margin and that the reporting counterparty does not post any margin with respect to the derivative transaction. |
| PRCL | Partially collateralised | The collateral agreement(s) between the counterparties stipulates that both counterparties regularly post only variation margin <br> with respect to the derivative transaction. |
| OWC1 | One-way collateralised: Counterparty 1 only | The collateral agreement(s) between the counterparties stipulates that the reporting counterparty posts the initial margin and <br> regularly posts variation margin and that the other counterparty does not post any margin with respect to the derivative <br> transaction. |
| OWC2 | One-way collateralised: Counterparty 2 only | The collateral agreement(s) between the counterparties stipulates that the other counterparty posts the initial margin and <br> regularly posts variation margin and that the reporting counterparty does not post any margin with respect to the derivative <br> transaction. |
| OWP1 | One-way/partially collateralised: Counterparty 1 | The collateral agreement(s) between the counterparties stipulates that the reporting counterparty posts the initial margin and <br> regularly posts variation margin and that the other counterparty regularly posts only variation margin. |
| OWP2 | One-way/partially collateralised: Counterparty 2 | The collateral agreement(s) between the counterparties stipulates that the other counterparty posts the initial margin and <br> regularly posts variation margin and that the reporting counterparty regularly posts only variation margin. |
| FLCL | Fully collateralised | The collateral agreement(s) between the counterparties stipulates that both counterparties post initial margin and regularly post <br> variation margin with respect to the derivative transaction. |

## Appendices for part 43 and 45 Technical Specification

## F.Events: Valid Action type and Event type combinations for part 43 and part 45 reporting

The table below, 'Valid Action type and Event type combinations', displays all valid and allowable combinations for Action type [\#26] and Event type [\#27] allowable values. Rows list all allowable Action types and columns list all allowable Event types. White and gray boxes with a check symbol $(\checkmark)$ indicate if the given combination is allowed for part 43 and/or part 45 reporting. All other combinations are expected to be rejected by the SDRs. For guidance on publicly reportable swap transactions, refer to $\S 43.2$ (a).

[^25]
## Appendices for part 43 and 45 Technical Specification

## 1. Allowable Action type sequences

Reporting of lifecycle event is facilitated by reporting of Action type [\#26] and Event type [\#27] combinations. The allowable action type sequence is established to avoid illogical submissions by the reporting counterparties. SDR validation rules should perform checks to ensure SDR permits certain action types after the last action type has been reported. If a submission is reported with an action type that is not possible based on the last action type submission, the validation rule must reject that submission. What action types are allowed is depicted in 2 separate flow diagrams for part 45 reporting (Figure 1) and part 43 reporting (Figure 2).
Part 45 Reporting: Permitted Action type sequences for lifecycle

## REPORTING

- If a swap is in an open state, certain action types are permitted as depicted in the diagram: MODI, CORR, VALU, MARU, PRTO, EROR, and TERM.
- If a swap is in a terminated state, certain action types are permitted as depicted in the diagram: MODI, CORR, VALU, MARU, EROR, and REVI.
- If a swap is in an errored state, only REVI action type is permitted,
- If a swap is in an expired or matured state, certain action types are permitted as depicted in the diagram: MODI, CORR, EROR,VALU, MARU.

# Appendices for part 43 and 45 Technical Specification 

## Part 43 Reporting: Permitted Action type sequences for lifecycle reporting

Similar to reporting for Part 45, lifecycle event is supported by Action type [\#26] and Event type [\#27] combinations for Part 43 reporting. The allowable action types are depicted in Figure 2.

Figure 2 - Permitted Action type sequences for Part 43 Reporting

## Appendices for part 43 and 45 Technical Specification

## 2. Examples of allowable Action type and Event type combinations

Examples 1 through 13 illustrates how different lifecycle events are reported in transaction reporting. Each row represents a submission to the SDR with a sample of data elements represented for
 Examples 14 and 15 illustrate daily end-of-day valuation and collateral reporting. These submissions are not applicable for part 43 reporting
** The examples do not include all data elements required to be reported and only include data elements relevant to illustrate the Action type and Event type combination.

Example 1 - New-Modify (amendment, update), Correction

## Example 2 - Error and Revive

## Example 3 - Early termination

Example 4 - Full novation
Example 5 - Partial novation

## Example 6 - Clearing

Example 7 - Compression
Example 8 - Exercise (Cash settled)
Example 9 - Exercise (Partially exercised, physically settled)
Example 10 - Exercise (Cancellable option)
Example 11 - Allocation
Example 12 - Credit event
Example 13 - Transfer transaction from one SDR to another SDR
Example 14 - Daily Valuation reporting (Action type = VALU)
Example 15 - Daily Collateral and margin reporting (Action type = MARU)

## Appendices for part 43 and 45 Technical Specification

## Sample scenarios for transaction reporting for life cycle events

Example 1 - New-Modify (amendment, update), Correction
This example illustrates how the different [Action type]-[Event type] combination is used to report changes to the previously submitted transaction. There are 3 types of changes [Update, Correction, and Amendment] that are explained in this example.

Submission 1: A new transaction is reported with the unique transaction identifier, LEI1RPT0001AAAA, as New-Trade (NEWT-TRAD) combination.
Submission 2: A mutually agreed change to the notional amount is reported as Modify-Trade (MODI-TRAD) with [Amendment indicator] = 'True'. This is an amendment.
Submission 3: A missing information, 'Other payment type', is reported as Modify-Trade (MODI-TRAD) combination with [Amendment indicator] = 'False'. This is an update
 This is a correction.

| Row | Action type [\#26] | $\begin{aligned} & \text { Event } \\ & \text { type } \\ & \text { [\#27] } \end{aligned}$ | Amendment indicator [\#28] | Event timestamp [\#30] | Event identifier [\#29] | $\qquad$ | Prior UTI (for one-toone and one-to-many relations between transactions) [\#101] | Notional amount [\#31] | Execution timestamp [\#96] | Counterparty 1 (reporting counterparty) [\#13] | Counterparty <br> 2 <br> \#14] | Other payment type [\#57] | Dissemination identifier [\#D1] | $\qquad$ | Dissemination timestamp [\#D3] |

Table 8 - Examples of reporting of New, Modify, and Correction transaction

## Example 2 - Error and Revive

This example illustrates how to report that the previous submission was submitted in error. This action will effectively remove the USI/UTI from the SDR's system.
Submission 1: A new transaction is reported with the unique transaction identifier, LEI1RPT0001BBBB, as New-Trade (NEWT-TRAD) combination.
Submission 2: The previous transaction was submitted in error to CFTC and the removal is reported with [Action type] = 'EROR' without any event type.
Submission 3: The previous submission was a mistake and transaction should be submitted to CFTC and the revive action is reported as [Action type] = 'REVI' without any event type.

| Row | Action type [\#26] | $\begin{aligned} & \text { Event } \\ & \text { type } \\ & \text { [\#27] } \end{aligned}$ | Amendment indicator [\#28] | Event timestamp <br> [\#30] | Event identifier [\#29] | $\qquad$ | Prior UTI (for one-toone and one-to-many relations between transactions) [\#101] | Notional amount [\#31] | Execution timestamp [\#96] | Counterparty 1 (reporting counterparty) <br> [\#13] | $\begin{gathered} \text { Counterparty } \\ 2 \\ {[\# 14]} \end{gathered}$ | Dissemination identifier [\#D1] | $\qquad$ | Dissemination timestamp [\#D3] |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Table 12 - Reporting of Partial Novation transaction

Example 6 - Clearing novation
This example illustrates how original swap and clearing swaps are reported when the original swap is cleared by a derivative clearing organization.
Submission 1: A new transaction is reported with the unique transaction identifier, LEI1RPT0001ALPHA as New-Trade (NEWT-TRAD) combination with [Cleared] = 'I' (intent to clear).
Submission 2: Upon clearing acceptance, the original swap transaction is extinguished and reported as Terminate-Clearing (TERM-CLRG) combination
Submission 3, 4: Simultaneously, two new clearing swaps are created that replaces the original swap. These two transactions are reported as New-Clearing (NEWT-CLRG) combination by the DCO as the reporting counterparty and the UTI of the original swap is reported in the [Prior UTI] of these transactions. Execution timestamp of clearing swap is the time when the original swap is accepted by the DCO.

## Sample scenarios for end of day daily reporting for valuation and collateral

## The table below lists four transactions that are used for illustrating end of day reporting of valuation and collateral.

Submission 1 and 2: These two transactions are collateralised at the portfolio level by reporting [Collateral portfolio code] = 'PORT001'.
Submission 3 and 4: These two transactions are collateralised at the transaction level and do not have portfolio codes to be reported.

[^27]Example 14 - Daily Valuation reporting (Action type = VALU)
This example illustrates how the end of day reporting of valuation related data elements are reported to the SDR.

## Appendices for part 43 and 45 Technical Specification

Submission 1 to 4: All required valuation related data elements are reported for each unique transaction identifier (UTI) using [Action type] = 'VALU'. In addition, if a transaction is collateralised at the portfolio level ( 1 and 2), applicable portfolio code is reported using [Collateral portfolio code] = 'PORT001'. Transactions collateralised at the transaction level (3 and 4) are reported using [Collateral portfolio code] = 'TRANSACTIONLEVEL'
