Subject: rule 12-261r at cme

Dear Sir, I implore you to veto rule 12-261r at the cme. This takes away the risk of deliveries by the shorts and has let the high frequency traders run roughshod over the mini grain markets. They have every advantage known to man with their systems and this will only multiply them. I could go on but this is at the crux of the problem. Why has the delivery system worked for 100 plus years and all of a sudden its not good enough. This rule would cave in to the high frequency traders. Thank you for your time Sincerely , Francis Mastroianni
